Introduction

This report documents how well California's children are doing—in terms of their education, health, family economic resources and safety. The statistics included show where the state has seen improvements, such as the decreasing rate of infant deaths, and where significant gaps remain, such as in the availability of quality child care. This compilation of new data focuses on how California measures up nationally, while also including some county-level statistics to reveal differences within the state. Together with the *California Report Card 2002*, these reports draw attention to the increasing body of research demonstrating the connection between children's well-being in their early years and their later K-12 success. In response to the data, this report offers strategies for improving young children's chances to thrive.

While new community, state and national efforts are focusing on “school readiness” and securing additional resources toward this end, many of California's youngest children still face tremendous odds. This report finds that one in five children lives in poverty, nearly one in four lives in a household that experiences food insecurity and one in seven lacks health coverage. In 2000, 172,000 children under age six were reported abused or neglected, and 28,440 children under age six were in foster care.

Racial disparities remain significant. While 24 percent of white children live in low-income families, 57 percent and 64 percent of African American and Latino children do. African American infants are over twice as likely as white infants to be born at a low birthweight (11.7% compared to 5.7%). Over half (52%) of Latino infants are born to mothers with less than a high school education, compared to 28 percent of Native American, 18 percent of African American, 11 percent of Asian/Pacific Islander and 9 percent of white infants. In some instances, the differences

along racial lines may be related to the socioeconomic differences across racial groups; in other instances, societal discrimination based on race may be a contributing factor. Children in immigrant families face special challenges, often in addition to their experiences as members of a particular racial group. Approximately 46 percent of California children live in immigrant families.

For all of the diverse challenges that California children face, we know that young children of all backgrounds are likely to thrive if their parents' nurturing is complemented by timely and preventive health care, a quality child care setting, sufficient food, shelter and other basic necessities as well as safe environments in which to play and grow.

Though much is known about the importance of children's development in their early years, the state of California has not made young children a top priority. The resources afforded by Proposition 10 of 1998, which dedicates tobacco tax revenues to improving the health and well-being of young children, are certainly beneficial, but they are not sufficient to fully address the needs of California's young children. Proposition 10 generated \$650 million in tobacco tax revenues in fiscal year 2000-01, less than one percent of the total state budget.

As documented in this report, there is clear and compelling evidence that young children's well-being—in the areas of education, health, family economic security and safety—has lasting implications for their future, not only in terms of success in school, but also in their capacity to realize their full human potential and be contributing members of our California community. Furthermore, the data illustrate that California's young children are growing up in circumstances that demand our attention and action. The following recommendations offer specific strategies to improve children's lives today and foster their success in the future.

Recommendations

Several overarching conclusions arise from the report's findings:

- **Young children's well-being must be a public priority.** Every year of a young child's life is critical; children cannot wait to have necessary health care, quality child care, family economic stability and safety.
- **Policy decisions and funding priorities must address the significant disparities in outcomes for children of different ethnic backgrounds.** California's services and policies must take into account our multicultural child population and address the gaps in opportunities that now exist.
- **California should collect and analyze more information about young children's well-being.** For example, few data exist about child care quality, young children's social and emotional well-being or children's exposure to domestic violence.

The following recommendations present specific strategies to promote children's school success and healthy development.

EARLY CARE AND EDUCATION

The Vision: All children are in care that promotes their learning and healthy development.

- **Create paid parental leave.** So that more parents have the opportunity to spend at least the critical early months with their children, create a family temporary disability insurance program that would allow workers to take up to three months off when a child enters the

family through birth, adoption or foster care placement; compensation would equal about 55% of a parent's regular wages.

- **Encourage parent participation in their children's education.** Child care centers and schools should involve all parents in school activities and make a special effort to reach out to those parents whose cultural background or own school experience may present barriers to their active engagement.
- **Improve access to high-quality child care for all children.** Create a strategic plan, with the input of diverse stakeholders, which outlines the elements of a high-quality child care system and the steps by which California will reach this goal. This plan would build upon the Legislature's recent work to craft an Education Master Plan.
 - **Address the shortage of infant and toddler care.** Develop incentives to help those interested in providing this special care. Provide greater help for families to select and afford the care that meets their children's needs.
 - **Increase the number of high-quality preschool programs** so that every three- and four-year-old has an opportunity to participate. Allocate state matching funds for several pilot communities to implement a voluntary, universal preschool program in their area. Los Angeles County's allocation of \$100 million in tobacco tax revenues toward this goal is an example of the possibility of leveraging local funds.
 - **Increase the number of after school programs.** Expand the state's successful after school program to more school and community sites, while ensuring consistently high program quality.

- **Help parents pay for quality child care.** Invest sufficient state funds to shorten the child care waiting list of eligible families for subsidized care by one-fifth from approximately 300,000 to 240,000 next year, with similar increments in the years following. Expansion must not lower quality.
- **Improve child care quality by investing in staff retention and professional development.** Increase state funds available for child care provider retention programs, which help increase education levels and reduce staff turnover, often through wage supplements.

HEALTH

The Vision: All children have health insurance that assures timely access to necessary treatment and preventive care.

- **Simplify children's enrollment into the state's health insurance programs, Medi-Cal and Healthy Families:**
 - Ensure that eligible newborns are automatically enrolled in Medi-Cal.
 - Speed up implementation of strategies known as Express Lane Eligibility that connect families to health insurance through the School Lunch and Food Stamps programs. Develop similar strategies for the Child Health and Disability Prevention program and Women, Infants and Children nutrition program.
 - Reduce paperwork by verifying family income through state databases and eliminating paperwork not required by federal law.
- Eliminate the cumbersome requirement that Medi-Cal families fill out detailed paperwork about their assets, which hardly ever affect their eligibility.
- **Ensure continuous health insurance for children** by streamlining the renewal process for state health insurance programs:
 - Simplify and reduce the length of renewal forms that families must complete.
 - Reduce required paperwork by utilizing state databases to verify information, such as family income.
 - Coordinate families' transition between Medi-Cal and Healthy Families at renewal.
- **Strengthen the health care options** for children who are not eligible for Medi-Cal and Healthy Families:
 - Support counties' efforts to provide universal access to health insurance for all children by helping counties obtain federal matching funds.
 - Offer children in the Child Health and Disability Prevention program the number of preventive care visits recommended by the American Academy of Pediatrics.

FAMILY ECONOMICS

The Vision: All families have the resources they need to provide for their children’s healthy development.

- **Create a state Earned Income Credit (EIC) for low-income working families.** A state EIC would offer tax relief to approximately two million low-income working families with children.
- **Increase the number of affordable housing units in each community.** California is estimated to need an additional 220,000 affordable housing units each year.
- **Require low-performing schools to offer school breakfasts.** In California, 21,000 children in 71 low-performing schools do not have access to a School Breakfast program. Offer technical assistance to these schools to apply for start-up monies from the state.
- **Increase the number of Summer Food Program sites.** One out of four California counties does not have even one summer food site and almost 50 percent of school sites that offer summer meals do not operate in August. Offer technical assistance to schools to apply for the Seamless Summer Food Waiver program. Furthermore, provide state start-up grants so that more communities can take advantage of federal matching funds available for the program.

SAFETY

The Vision: All young children are safe inside and outside their homes.

- **Prevent child abuse and neglect.** Direct resources to early prevention services, such as ongoing,

supervised nurse home-visiting to at-risk families. In addition, shore up the capacity of Child Protective Services to respond to reports of abuse and neglect by training and hiring additional qualified staff and reducing caseloads.

- **Provide services to children who experience domestic violence.** Support comprehensive and coordinated community-based services for battered women and their children.
- **Improve children’s experience in foster care.** Address basic inadequacies in the foster care system, such as low reimbursement rates for family foster care homes and the large caseloads of child welfare workers. Develop strategies to minimize the disruptions in children’s lives by limiting, when appropriate, frequent transfers to new families and new schools.

Notes on the Indicators

State Ranking

Indicators are ranked to allow the reader to compare California to the rest of the nation. The ranking goes from best to worst, with 1 representing the best and 51 representing the worst, when all 50 states and the District of Columbia are included in the ranking. The total number of states ranked is listed for each indicator, i.e. “Rank: 40 out of 45.” When data from other states are not available, California is ranked as “Better than average,” “Average,” or “Worse than average” in comparison to national figures. Finally, when national or California data is not available for comparison, the rank is not available (N/A); when the indicator is not appropriately placed on a best-to-worst scale, the indicator is not ranked (N/R).

County Ranking

The County Charts at the end of the report contain rankings for individual counties based on three-year averages. Rankings should be viewed in the context of the size of the population of each county. In counties with small populations, yearly fluctuations of a small number of incidents may significantly affect rates and ranking. To protect individuals’ confidentiality, an asterisk appears in place of data when the number of incidents is 10 or fewer. In this case, the county rank is not available (N/A). The total number of counties ranked is included in the notes for each chart. When more than one county has the same three-year rate, they receive the same ranking.

Demographics

Due to the availability of Census data for the years 1990 and 2000 only, California demographic figures for 1991 through 1999 and 2001 were calculated by assuming that the percentage change between 1990 and 2000 was evenly distributed across each of the 10 years and that the constant rate of change continued through 2001

(except as noted on individual indicators). All national rates provided by the Centers for Disease Control and Prevention (CDC) are based on population projections from the 1990 Census, which have not been updated to reflect the 2000 Census.

Racial and ethnic categories provided in this report categorize people of Latino/Hispanic ancestry separately from other racial groups, separating those people self-designated as Latino/Hispanic from other groups (such as African American, White, or Native American), although people of Latino/Hispanic origin may be of any race.

In 2000, the United States Census Bureau and other government agencies began collecting race/ethnicity data that allowed people to indicate that they belonged to more than one race. People self-identifying as belonging to two or more races are categorized as “Multiracial” when possible.

Education Indicators

1. Participation in Preschool
2. Licensed Child Care Spaces
3. Children in Head Start
4. Subsidized Child Care
5. After School Programs
6. Percentage of Income Spent on Child Care
7. Compensation for Early Childhood Education Workers
8. Percentage of Infants Born to Teen Mothers
9. Percentage of Births by Mother's Education
10. Percentage of Births by Father's Education
11. English Learner (EL) Students
12. Standardized Testing and Reporting (STAR): Second Grade
13. Standardized Testing and Reporting (STAR): Fourth Grade
14. NAEP Math Proficiency: Fourth and Eighth Grades
15. NAEP Science Proficiency: Fourth and Eighth Grades
16. Graduates Prepared for College
17. High School Dropout Rate
18. Public School Expenditures
19. Student/Counselor Ratio
20. Student/Teacher Ratio
21. Teaching Credentials
22. Average Teacher Salary

Education

Children's Critical Early Years

1. Participation in Preschool

This indicator measures the number and percentage of 3- and 4-year-olds enrolled in preschool.

California Statistics

	2000
Number of children ages 3-4 enrolled in preschool	547,066
Percentage of children enrolled	53.2%

National Statistics

	2000
Number of children ages 3-4 enrolled in preschool	4,957,582
Percentage of children enrolled	63.9%

State Rank: Worse than average.

2. U.S. Census Bureau, Census 2000, Summary File 3, <http://censtats.census.gov/data/US/01000.pdf>, "Table DP-2. Profile of Selected Social Characteristics: 2000," U.S. data, released 4 June 2002.
3. U.S. Census Bureau, Census 2000, Summary File 1 (100% Data), <http://factfinder.census.gov>, "Table PCT12: Sex by Age," accessed 31 July 2002.

2. Licensed Child Care Spaces

This indicator measures the number of licensed child care spaces and the percentage of children ages 0-5 with working parents who are served by licensed care.

California Trend: Number of Spaces

	1998	2000
Number of center spaces for infants (ages 0-1)	24,567	27,715
Number of center spaces for children (ages 2-5)	405,977	406,278
Number of center spaces for school-age children (ages 6+)	128,318	142,936
Number of family child care spaces for all ages	259,605	309,942
Total spaces (center and family care) available for all ages	818,467	886,871

California Statistics: Children Ages 0-5 Served

	2000
Total spaces available for children 0-5 years old	623,058
Number of children ages 0-5 living in families in which all parents are working at least 30 hours per week	1,010,000
Percentage of children ages 0-5 in need that can be served by licensed care	62.3%

State Rank: N/A.

Notes:

Comparable national data are not available. The total number of child care spaces available for children ages 0-5 is estimated by the California Child Care Resource & Referral Network. It represents the total number of spaces in licensed centers for children ages 0-5 and the estimated number of spaces for children 0-5 in licensed family child care homes (the estimate is based on enrollment of children ages 0-5 in family child care in 2000).

Sources:

1. California Child Care Resource & Referral Network, "The 2001 California Child Care Portfolio," <http://www.rnetwork.org/calchildcare/onramp/article.php?ID=624> (San Francisco: CCCRRN, January 2002).
2. U.S. Census Bureau, 2000 Census, "Table DP-2. Profile of Selected Social Characteristics: 2000," <http://censtats.census.gov/data/CA/04006.pdf>, 14 May 2002.

3. Children in Head Start

This indicator measures the number and percentage of children ages 3-4 living below the Federal Poverty Level (in 2000, \$14,150 or less for a family of three) enrolled in Head Start. Head Start is a comprehensive child development program for low-income preschool-age children and their families.

California Trend

	1998	1999	2000
Number in Head Start	86,368	88,860	95,280
Estimated number of children ages 3-4 living in poverty	298,614	241,186	229,805
Percentage of eligible children served	29%	37%	41%

National Trend

	1998	1999	2000
Number in Head Start	822,316	826,016	857,664
Estimated number of children ages 3-4 living in poverty	1,742,810	1,557,065	1,486,614
Percentage of eligible children served	47%	53%	58%

State Rank: Worse than average.**Notes:**

The number of children ages 3-4 living in poverty is estimated from the number of children ages 0-4 living in poverty, by using the proportion of children ages 3-4 relative to the total number of children ages 0-4.

7. U.S. Census Bureau, "Poverty in the United States: 1998," <http://www.census.gov/hhes/www/povty98.html>, Current Population Survey, March 2000, revised 10 December 2001.

8. U.S. Department of Health and Human Services, Assistant Secretary for Planning and Evaluation, "The 2000 HHS Poverty Guidelines," <http://aspe.hhs.gov/poverty/00poverty.htm>, revised 7 January 2002.

4. Subsidized Child Care

This indicator measures the estimated number of California children in need of subsidized child care and the number of spaces available to them. Statistics are presented as a four-year average.

California Average

	1996-2000
Number of California children eligible for subsidized care	1,591,903
Total number of eligible children in need	795,952
Total number of children served from income-eligible working families	517,434
Percentage served	65%
Total number not currently served and in need of care	278,518
Percentage not served	35%

State Rank: N/A.

Notes:

Comparable national data are not available. The number of eligible children in 1995-1997 was an average monthly number determined by Abt Associates in a report called "National Study of Child Care for Low-Income Families: State and Community Substudy, Interim Report" (Abt Associates, November 2000). California Budget Project used Abt's numbers for 1995-1997 to create an average monthly estimate of California children eligible for subsidized care for 1996-2000. The total number of eligible children in need assumes that 50% of qualified children will use the subsidies. The model used to determine the numbers in the Abt Associates report is adopted from an Urban Institute micro-simulation model that tabulated children under age 13 in families in which all parents work and in which income does not exceed 75 percent of the state median, as adjusted by family size. In adopting this estimate, California Budget Project assumes that the share of California families with working parents whose incomes are at or below 75 percent of the state median has not changed since the 1995-97 period. The total number of children served by subsidies is not available from the California Department of Education, so the estimate of the total number of children served is based on California Department of Finance data, which divides the total expenditures for subsidies by average child care costs.

Source:

California Budget Project, "How Many Children Need Subsidized Care in California?," <http://www.cbp.org/2001/qh010328.pdf>, 28 March 2001.

5. After School Programs

This indicator measures the number of children ages 5-14 living in families in which both parents or the single parent works at least 30 hours per week, and the number of children in such families who qualify for subsidized after school care (families with an annual income at or below 185% of the Federal Poverty Level). Additionally, this indicator shows the estimated number of subsidized spaces in after school programs, as well as the number and percentage of children in need who lack subsidized after school care.

California Statistics

	2001-2002
Number of children ages 5-14 with full-time working parents	2,903,000
Number of children ages 5-14 needing subsidized after school programs	1,158,000
Spaces in Before and After School Learning and Safe Neighborhoods Partnership Programs (BASLSNPP)	95,000
Spaces in 21st Century Community Learning Centers	189,000
Spaces in child care subsidy programs	254,000
Total subsidized after school spaces	538,000
Number of children in need lacking subsidized after school spaces	620,000
Percentage of children in need lacking subsidized after school spaces	54%

State Rank: N/A.

Notes:

The number of children ages 5-14 with working parents living at or below 185% of the Federal Poverty Level was estimated by assuming that the same percentage of children with full-time working parents lived at or below 185% of the FPL as the percentage of the total 5-14 child population (approximately 40%), and is based on 1998-2000 data. *California's After-School Choice* estimated that 100,000 children would be served by BASLSNPP in 2001-02; the 95,000 statistic is based on updated information from the California Department of Education. Additionally, the report estimated that there were 193,000 children ages 5-14 in child care subsidy programs; the 254,000 statistic is based on increased program funding for 2001-2002. The estimated number of spaces in 21st Century Community Learning Centers is based on Afterschool Alliance's analysis of funding data, using a \$700 per-child cost, as quoted by the U.S. Department of Education in February 2002.

Sources:

1. Urban Studies Institute, University of Louisville, special data run, using data from U.S. Census Bureau, Current Population Survey, March 1999-2001, August 2002.
2. U.S. Census Bureau, Current Population Survey, March 1999-2001, generated by Stacy J. Lyons, using SuppORT, 9 June 2002.
3. Fight Crime: Invest in Kids California, *California's After-School Choice: Juvenile Crime or Safe Learning Time* (Oakland, CA: Fight Crime, September 2001), pp. 31-33; revised figures based on personal correspondence with Fight Crime, August 2002.
4. Afterschool Alliance, "Afterschool in California," unpublished data from U.S. Department of Education, September 2002.

6. Percentage of Income Spent on Child Care

This indicator measures the average percentage of earnings spent on child care by working families paying for care with children under age 13, by selected characteristics. Income limits are based on the Federal Poverty Threshold (FPT) for 1997.

California Data

	1997
Percentage of families with children under 13 who pay for child care	49%
Average percentage of earnings spent on child care—all families	10.8%
Average percentage of earnings spent on child care—youngest child under age 5	11.1%
Average percentage of earnings spent on child care—family income less than 200% FPT	18.0%
Average percentage of earnings spent on child care—family income more than 200% FPT	7.2%

National Data

	1997
Percentage of families with children under 13 who pay for child care	48%
Average percentage of earnings spent on child care—all families	9.2%
Average percentage of earnings spent on child care—youngest child under age 5	10.3%
Average percentage of earnings spent on child care—family income less than 200% FPT	15.9%
Average percentage of earnings spent on child care—family income more than 200% FPT	6.3%

State Rank: Worse than average.

Notes:

In 1997, 200% of the Federal Poverty Threshold was \$25,838 for a family of three and \$32,552 for a family of four. The Federal Poverty Threshold is also used to describe the Federal Poverty Level (FPL), but is calculated slightly differently than the Federal Poverty Guidelines that are used throughout *State of Our Children* to describe the FPL. The dollars reported by National Study of American Families respondents are their own expenses and not necessarily the full cost of their children's care. If a family's child care costs are paid entirely by the government or another person or organization, that family will be classified as not paying for child care in this analysis. If a family pays a portion of the care but not the full cost (for instance, when a family receiving a subsidy makes a co-payment), the dollar amount analyzed here is only the family's portion of the payment.

Source:

Linda Giannarelli and James Barsimantov, *Child Care Expenses of America's Families*, based on Urban Institute calculations from the 1997 National Survey of America's Families, <http://newfederalism.urban.org/html/op40/occa40.html> (Washington, D.C.: Urban Institute, December 2000).

7. Compensation for Early Childhood Education Workers

This indicator measures the compensation that early childhood education workers receive. Low compensation contributes to a high turnover rate of workers, which has been shown to impact the quality of care provided to children.

California Trend

	1998	1999	2000
Child care workers—hourly wage	\$7.95	\$8.38	\$9.06
Child care workers—annual salary	\$15,900	\$16,760	\$18,120
Preschool teachers—hourly wage	\$9.92	\$10.16	\$11.19
Preschool teachers—annual salary	\$19,840	\$20,320	\$22,380

National Trend

	1998	1999	2000
Child care workers—hourly wage	\$6.77	\$7.04	\$7.47
Child care workers—annual salary	\$13,540	\$14,080	\$14,940
Preschool teachers—hourly wage	\$8.93	\$9.06	\$9.22
Preschool teachers—annual salary	\$17,860	\$18,120	\$18,440

State Rank: Better than average.

Notes:

The annual salary calculation is based on working 40 hours per week, 50 weeks per year. The California and national data are not directly comparable because the compensation information provided does not adjust for different costs of living across states. For instance, workers in California are paid more compared to workers in many other states, but it is significantly more expensive to live in many parts of California than it is to live in other states. The national data are a median of state data.

11. English Learner (EL) Students

This indicator measures the percentage of public school students identified as English Learners (EL) and Fluent-English Proficient (FEP), as well as the percentage of students who have been redesignated from EL to FEP.

California Trend

	1998-1999	1999-2000	2000-2001
English Learner (EL) students	24.7%	24.9%	25.0%
Fluent-English Proficient (FEP) students	13.0%	13.3%	14.0%
Redesignated FEP students	7.4%	7.6%	8.9%

National Trend

	1998-1999	1999-2000	2000-2001
English Learner (EL) students	N/A	8.0%	N/A
Redesignated FEP students	N/A	9.3%	N/A

State Rank: N/R.

**Notes:**

English Learners are those students whose primary language is not English, and who, on the basis of state-approved oral language assessment procedures, have been determined to lack the English language skills necessary to succeed in the school's regular instructional programs. Students are designated FEP if their primary language is not English and if they have met the district criteria for proficiency in English.

Kindler, National Clearinghouse for English Language Acquisition and Language Instruction Educational Programs, "Survey of the States' Limited English Proficient Students and Available Education Programs and Services, 1999-2000 Summary Report," <http://www.ncbe.gwu.edu/ncbepubs/seareports/99-00/sea9900.pdf>, May 2002.

12. Standardized Testing and Reporting (STAR): Second Grade

This indicator measures the percentage of California second grade students scoring at or above the 50th National Percentile Rank (NPR) in reading and math.

California Trend: Reading

	1999	2000	2001
Percentage of all students above 50th NPR	44%	49%	51%
Percentage of economically disadvantaged students above 50th NPR	27%	33%	35%
Percentage of non-economically disadvantaged students above 50th NPR	59%	71%	72%
Percentage of English Learners (EL) above 50th NPR	19%	25%	28%
Percentage of English Only and Fluent-English Proficient (FEP) students above 50th NPR	56%	61%	63%

State Rank: N/A.

California Trend: Math

	1999	2000	2001
Percentage of all students above 50th NPR	49%	57%	58%
Percentage of economically disadvantaged students above 50th NPR	36%	43%	46%
Percentage of non-economically disadvantaged students above 50th NPR	61%	74%	75%
Percentage of English Learners (EL) above 50th NPR	33%	40%	43%
Percentage of English Only and Fluent-English Proficient (FEP) students above 50th NPR	57%	65%	66%

State Rank: N/A.

Notes:

The STAR program requires that all California students in 2nd through 11th grade are tested each spring on basic academic skills. The “percent at or above the 50th National Percentile Rank” is used to report group performance on California’s STAR test. The data presented here tells what percentage of the California group performed at or above the national average. The 50th percentile is the median: by definition, half the students in the national group score higher and half score lower than the 50th percentile. The California Department of Education recommends using this method for year-to-year comparisons. Economically disadvantaged students are those who meet either one of two criteria: 1) neither parent received a high school diploma or 2) the pupil participates in the free or reduced-price lunch program. English Learners are those students whose primary language is not English, and who, on the basis of the state-approved oral language assessment procedures (grades K-12), have been determined to lack the English language skills necessary to succeed in the school’s regular instructional programs. Fluent-English Proficient students are those students whose primary language is not English and who have met the district criteria for proficiency in English.

14. NAEP Math Proficiency: Fourth and Eighth Grades

This indicator measures the average scores of students on the National Assessment of Educational Progress (NAEP) Math Assessment, and the percentage of students who are proficient in math in 4th and 8th grade. The NAEP Math Assessment rates students' proficiency on a scale of 0-500, with a score of 249 or higher considered proficient on the 4th grade test, and a score of 299 or higher considered proficient on the 8th grade test.

California Trend

	1992	1996	2000
Mean score—4th grade	208	209	214
Percentage proficient—4th grade	12%	11%	15%
Mean score—8th grade	261	263	262
Percentage proficient—8th grade	16%	17%	18%

Lowest 8th grade NAEP math proficiency

HOW CALIFORNIA MEASURES UP:

Highest 4th grade NAEP science proficiency

Lowest 4th grade NAEP science proficiency

State Rank: 4th grade: 31 out of 40.

State Rank: 8th grade: 24 out of 40.

Percentage of Students Proficient in Math, 4th Grade, California and United States, 2000

Percentage of Students Proficient in Math, 8th Grade, California and United States, 2000

Notes:

The NAEP started in 1990, and since 1992 has been administered every four years. The ranking is based on the percentage of public school students in each state who scored at or above the proficient level in 2000 (249/500 for fourth grade students and 299/500 for eighth grade students). Some states do not administer the tests; the ranking is based on data from the forty participating states.

Source:

U.S. Department of Education, Office of Educational Research and Improvement, National Center for Education Statistics, "National Assessment of Educational Progress (NAEP)," <http://nces.ed.gov/nationsreportcard/naepdata>, revised 25 July 2001.

15. NAEP Science Proficiency: Fourth and Eighth Grades

This indicator measures the average scores of students on the National Assessment of Educational Progress (NAEP) Science Assessment, and the percentage of students who are proficient in science in 4th and 8th grade. The NAEP Science Assessment rates students' science proficiency on a scale of 0-300, with a score of 170 or higher considered proficient on both the 4th and 8th grade tests.

California Trend

	1996	2000
Mean score—4th grade	N/A	131

16. Graduates Prepared for College

This indicator measures the percentage of 12th grade graduates in California public schools completing all courses required for University of California and/or California State University admission.

California Trend

	1998-1999	1999-2000	2000-2001
All	36%	35%	36%
African American	26%	25%	26%
Asian	59%	60%	58%
Filipino	45%	45%	46%
Latino	22%	22%	23%
Multiracial/Other	29%	16%	23%
Native American	22%	23%	23%
Pacific Islander	27%	26%	26%
White	41%	40%	41%

State Rank: N/A.

Notes:

1998-1999 national data reveal that 44.2% of high school graduates completed coursework comparable to the UC/CSU requirements. This national average is based on the number of graduates who completed a combination of courses that included the following: 4 units English, 3 units Math, 3 units Science, 3 units Social Studies, 2 units Foreign Language.

Sources:

17. High School Dropout Rate

This indicator measures the percentage of public school students in grades 9-12 who leave school over the course of one year and do not enroll in a different school or notify the school of a change of residence.

California Trend

	1998-1999	1999-2000	2000-2001
All	2.8%	2.8%	2.8%
African American	4.7%	4.6%	4.9%
Asian/Pacific Islander	1.7%	1.6%	1.7%
Latino	3.9%	3.9%	3.8%
Native American	4.0%	3.5%	3.6%
White	1.7%	1.7%	1.7%

State Rank: N/A.

Annual High School Dropout Rate by Race/Ethnicity, California, 1998-2001 Average

Notes:

The dropout rates provided above are annual rates; the cumulative effect of an annual 2.8% dropout rate is that 11.2% of students drop out over a four-year period. The percentage of 18- to 24-year-olds who have completed high school in California averaged 82.5% during 1998-2000, below the national average of 85.7% for the same years. This is an imperfect measure of high school dropout rates, however, as the 18- to 24-year-olds living in California (or in any other state) did not necessarily attend high school in the state. The California Department of Education will have more comprehensive data about students who do not graduate from high school when the California School Information Services (CSIS) program is in place; scheduled completion is in 2005.

Highest student/counselor ratio

Notes:

The National Education Association (NEA) national data are not directly comparable with California Department of Education (CDE) state data as the figures are based on different expenditures. The ranking is based on state-level data for the 2000-2001 school year provided by the NEA. CDE's "Current Expense of Education" is the total General Fund expenditures minus food services, facilities acquisition, construction and certain other items. That number is divided by Average Daily Attendance to calculate the per pupil expenditure.

19. Student/Counselor Ratio

The indicator measures the average number of students to school counselors in the state. The American School Counselor Association recommends a student to counselor ratio of 250:1.

California Trend

	1998-1999	1999-2000	2000-2001
Student enrollment	5,844,111	5,951,612	6,050,895
Number of counselors (FTE)	5,727	6,077	6,401
Ratio	1,020:1	979:1	945:1

National Trend

	1998-1999	1999-2000	2000-2001
Ratio	500:1	490:1	485:1

State Rank: 51 out of 51.

Sources:

1. California Department of Education, Counseling and Student Support Services, "Student-Counselor Ratios in California, 1992/93 - 2000/01," http://www.cde.ca.gov/spbranch/ssp/cacratio92_01.htm, accessed 2 May 2002.

20. Student/Teacher Ratio

This indicator measures the total enrollment in relation to the equivalent number of full-time teachers for students in grades K-12.

California Trend

	1998-1999	1999-2000	2000-2001
Student/teacher ratio	21:1	21:1	21:1

National Trend

	1998-1999	1999-2000	2000-2001
Student/teacher ratio	16:1	16:1	16:1

State Rank: 50 out of 51.

Notes:

The student/teacher ratio was calculated by dividing total student enrollment into the equivalent of full-time teachers, measured in the fall of each year. The full-time teacher equivalent calculation includes hours worked by part-time teachers, special education teachers and others, and thus is not the same as average class size. The average class size for students in California in 2000-2001 was 19 students for grades K-3 and 28 students for grades 4-6.

21. Teaching Credentials

This indicator measures the number and percentage of teachers with a full teaching credential.

California Trend

	1998-1999	1999-2000	2000-2001
Number of teachers	283,975	292,012	301,361
Number with full credential	248,535	251,431	258,934
Percentage with full credential	87.5%	86.1%	85.9%

State Rank: N/A.

Notes:

Comparable national data are not available.

Highest student/
teacher ratio

HOW CALIFORNIA MEASURES UP:**Highest average teacher salary****Lowest average teacher salary**

22. Average Teacher Salary

This indicator measures the average salary paid to public school teachers. The adjusted salary figure takes into account cost-of-living differences across geographical areas.

California Statistics

	1999-2000
Average salary	\$47,680
Cost of living index	122.7
Salary adjustment	-\$8,835
Adjusted average salary	\$38,845

National Statistics

	1999-2000
Average salary	\$41,820
Cost of living index	100
Salary adjustment	\$0
Adjusted average salary	\$41,820

State Rank: 32 out of 51.

Notes:

The ranking is based on the adjusted average salary for all 50 states and the District of Columbia. The Cost of Living Index was calculated by the American Federation of Teachers (AFT) and is based on a scale in which 100 represents the median. For details, see F. Howard Nelson, "An Interstate Cost-of-Living Index," *Educational Evaluation and Policy Analysis*, Spring 1991, vol. 13, <http://www.aft.org/research/reports/col/colpape3.htm>, 103-111. California's Cost of Living Index for 1999-2000 was the third highest in the nation.

Health

Children's Critical Early Years

1. Uninsured Children

This indicator measures the number and percentage of children ages 0-17 who lacked health insurance at any time during a one-year period.

California Statistics: By Race/Ethnicity

	2001	
	Number	Percentage
All	1,323,000	14.3%
African American	40,000	6.1%
Asian/Pacific Islander	81,000	9.1%
Latino	968,000	23.9%
Native American	8,300	16.8%
White	261,000	8.1%

California Statistics: By Income

	2001
Family income up to 100% of the FPL (\leq \$14,630)	24.8%
Family income 101%-200% of the FPL (\$14,631-\$29,260)	21.8%
Family income 201%-300% of the FPL (\$29,261-\$43,890)	13.2%
Family income greater than 300% of the FPL (\$43,891 and above)	4.4%

State Rank: N/A.

Percentage of Uninsured Children by Race/Ethnicity, California, 2001

Percentage of Uninsured Children by Income Level, California, 2001

Notes:

The California Health Interview Survey, first conducted in 2001 by the UCLA Center for Health Policy Research, is the largest state health survey conducted in the United States, with future surveys planned for every two years. In 2001, survey participants included 55,428 adults, 5,801 teens (ages 12-17) and 12,592 children (ages 0-11). Previous estimates about uninsured children have come from the U.S. Census Bureau's Current Population Survey (CPS), a national survey of approximately 50,000 adults. The CHIS data presented above is not directly comparable to previous CPS figures; the 2001 CPS estimated that 15.4% of children ages 0-17 in California were uninsured at all times during 2000. The numbers of

children provided above are based on demographic information from the 2000 Census, and the Federal Poverty Level (FPL) information is based on the 2001 Federal Poverty Guidelines for a family of three.

4. U.S. Department of Health and Human Services, Assistant Secretary for Planning and Evaluation, "The 2001 HHS Poverty Guidelines," <http://aspe.hhs.gov/poverty/01poverty.htm>, revised 4 March 2002.

2. Enrollment in Medicaid and SCHIP

This indicator measures the number of children ages 0-18 enrolled in State Children's Health Insurance Programs (SCHIP) and the number of children ages 0-20 enrolled in Medicaid. These no- and low-cost health insurance programs are available to children in low-income families. In California, the SCHIP program is called Healthy Families and the Medicaid program is called Medi-Cal for Children.

California Trend

	FY1999	FY2000	FY2001
Number of children ages 0-18 enrolled: Healthy Families	209,341	362,894	503,901
Number of children ages 0-20 enrolled: Medi-Cal	2,774,311	2,790,437	2,744,884

National Trend

	FY1999	FY2000	FY2001
Number of children ages 0-18 enrolled: SCHIP	1,959,330	3,333,879	4,601,098
Number of children ages 0-20 enrolled: Medicaid	16,100,000	16,400,000	16,600,000

State Rank: N/R.

Notes:

California SCHIP enrollment data include the number of children ages 0-18 enrolled in SCHIP during December of the given fiscal year, while national SCHIP enrollment data include the yearly number of children ages 0-18 ever enrolled in SCHIP. California Medi-Cal enrollment data include the number of children ages 0-20 enrolled in Medi-Cal during January of the given fiscal year, while national Medicaid enrollment data represent the average monthly enrollment for the year.

HOW CALIFORNIA MEASURES UP:

Highest rate of prenatal care

Lowest rate of prenatal care

3. Prenatal Care

This indicator measures the percentage of mothers beginning prenatal care in the first trimesters of their pregnancies for births occurring in the given year.

California Trend

	1998	1999	2000
All	81.1%	82.2%	83.1%
African American	77.8%	79.2%	79.9%
Asian/Pacific Islander	83.6%	84.5%	85.9%
Latino	76.9%	78.2%	79.3%
Native American	70.9%	71.3%	73.1%
White	88.2%	89.2%	89.9%

National Trend

	1998	1999	2000
All	82.8%	83.2%	83.2%
African American	73.3%	74.1%	74.3%
Asian/Pacific Islander	83.1%	83.7%	84.0%
Latino	74.3%	74.4%	74.4%
Native American	68.8%	69.5%	69.3%
White	87.9%	88.4%	88.5%

State Rank: 27 out of 51.

Percentage of Mothers Receiving Prenatal Care in the First Trimester, California, 1998-2000

Notes:

The ranking is based on the 1998-2000 average percentage of mothers of all races beginning prenatal care in the first trimester for each state and the District of Columbia. Because the California Department of Health Services has a "White/Other" category rather than a "White" category for mothers' prenatal care, the "White" California statistics are from the National Vital Statistics Report (also the source of the national data) to keep the racial/ethnic groups comparable with national data. The rest of the California percentages are from the California Department of Health Services, which changed race reporting in 2000 to allow the reporting of up to three races. For most vital statistics, however, the California Department of Health Services does not report a "Multiracial" category; the California racial/ethnic groups provided above generally correspond to the first race/ethnicity listed for the mother on the infant's birth certificate.

4. Infant Mortality

This indicator measures the number of infants who die in their first year of life per 1,000 infants born in a given year.

California Trend

	1998	1999	2000
All	5.7	5.4	5.4
African American	13.7	12.9	12.8
Asian/Pacific Islander	4.1	3.7	3.6
Latino	5.5	5.2	5.3
Multiracial	N/A	N/A	10.4
Native American	8.1	5.2	4.1
White/Other	5.0	4.7	4.8

National Trend

	1998	1999	2000
All	7.2	7.0	6.9
African American	13.8	14.0	13.6
Asian/Pacific Islander	5.5	4.8	4.9
Latino	5.8	5.7	5.6
Multiracial	N/A	N/A	N/A
Native American	9.3	9.3	8.3
White	6.0	5.8	5.7

State Rank: 6 out of 51.

HOW CALIFORNIA MEASURES UP

Infant Mortality Rate per 1,000, California and United States, 2000

Notes:

The ranking is based on 1998-2000 national infant mortality data for all races in all 50 states and the District of Columbia. The racial/ethnic groups provided above are those of the mother for all data except 2000 California data, which are based on the race of the infant. In 2000, the California Department of Health Services changed race reporting to allow the reporting of up to three races, which is reported as “Multiracial” for infant mortality; comparable national data are not available. Because California has a “White/Other” category for infant mortality, these data are not directly comparable to national figures for “White” mothers of infants. The national race/ethnicity data are linked birth/infant death data, in which information from the death certificate is linked to information from the birth certificate for each infant under one year of age who died in the given year. This linkage allows for more detailed analyses of infant mortality patterns and results in more accurate racial/ethnic data.

5. S.J. Ventura, *et al.*, "Births: Final Data for 1999," National Vital Statistics Reports, vol. 49, no. 1, Tables 24 & 46, http://www.cdc.gov/nchs/data/nvsr/nvsr49/nvsr49_01.pdf, 17 April 2001.
6. S.J. Ventura, *et al.*, "Births: Final Data for 2000," National Vital Statistics Reports, vol. 50, no. 5, Tables 24, 44 & 46, http://www.cdc.gov/nchs/data/nvsr/nvsr50/nvsr50_05.pdf, 12 February 2002.

6. Elevated Blood Lead Levels

This indicator estimates the percentage of children ages 0-5 whose blood lead levels (BLLs) are greater than 10, 15 and 20 micrograms per deciliter. The Centers for Disease Control and Prevention have established that elevated BLLs, of 10 micrograms per deciliter and higher, adversely affect the cognitive development and behavior of young children.

National Trend

	1996	1997	1998
Percentage with BLLs \geq 10 micrograms/deciliter	10.5%	8.6%	7.6%
Percentage with BLLs \geq 15 micrograms/deciliter	3.9%	3.2%	2.7%
Percentage with BLLs \geq 20 micrograms/deciliter	1.9%	1.5%	1.2%

State Rank: N/A.

Notes:

The table above is based on data from over one million children tested per year in 19 selected state surveillance programs in the U.S., representing about 33% of all U.S. children ages 0-5. California was not one of the states included. In California, doctors are not required to report elevated BLLs unless they exceed 20 micrograms/deciliter; reporting is optional when BLLs are greater than 10 micrograms/deciliter. In 2001, 1,248 children ages 0-5 in California were reported to the California Department of Health Services (DHS) for having BLLs exceeding 10 micrograms/deciliter in 2001 (0.03% of all children in California), but the Environmental Working Group, a nonprofit environmental research organization, estimates that as many as 70,000 children may have elevated BLLs each year (2.3% of all children ages 0-5 in California, or over 50 times as many children with elevated BLLs as are reported to DHS).

7. Teen Birth Rate

This indicator measures the number of births to females ages 15-19 per 1,000 females of the same age group.

California Trend

	1998	1999	2000
All	56.5	52.3	47.0
African American	76.7	68.6	63.1
Asian/Pacific Islander	21.7	20.6	18.3
Latino	74.0	69.1	51.2
Native American	87.4	82.3	78.7
White/Other	29.8	26.5	23.2

National Trend

	1998	1999	2000
All	51.1	49.6	48.7
African American	85.4	81.0	79.2
Asian/Pacific Islander	23.1	22.3	21.8
Latino	93.6	93.4	94.4
Native American	72.1	67.8	67.9
White	35.2	34.0	32.8

State Rank: 32 out of 51.

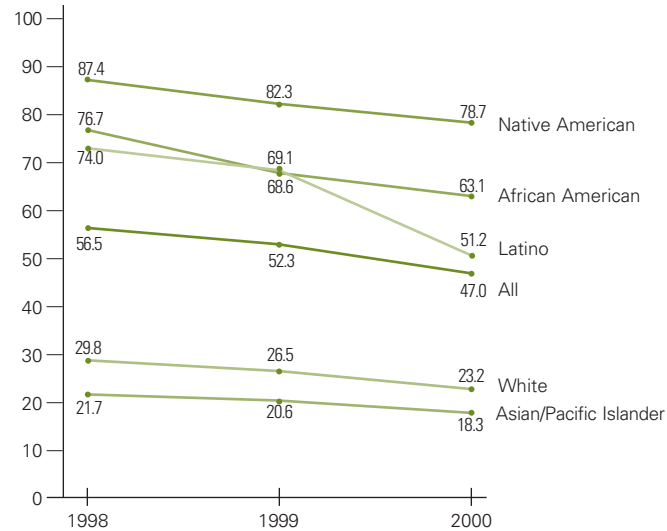

HOW CALIFORNIA MEASURES UP

Lowest teen birth rate

Highest teen birth rate

Teen Birth Rate per 1,000, California, 1998-2000

Notes:

The ranking is based on the 1998-2000 average teen birth rate for teens of all races in all 50 states and the District of Columbia. Beginning in 2000, the California Department of Health Services allowed for the reporting of up to three racial categories, so 2000 racial data may not be directly comparable to racial data from previous years. For most vital statistics, however, the California Department of Health Services does not report a "Multiracial" category; the race/ethnicity reported for California for 2000 generally corresponds to the first race/ethnicity listed for the mother on the birth certificate. Because California has a "White/Other" category for teen birth rates, these data are not directly comparable to national figures on "White" teen birth rates. National teen birth rates and the numbers for all states, used to rank California, are based on demographic projections from the 1990 Census which have not been changed to reflect data collected in the 2000 Census. California rates are based on demographics that reflect 2000 Census numbers in order to provide the most accurate data available for California.

8. Early Childhood Immunizations

This indicator measures the percentage of children ages 19 to 35 months who received vaccination coverage according to the 4:3:1:3:3 vaccination series recommended by the Centers for Disease Control and Prevention. This vaccination series includes four DTaP vaccines (diphtheria, tetanus and pertussis), three IPV vaccines (inactivated polio), one MMR vaccine (measles, mumps and rubella), 3 Hib vaccines (*Haemophilus influenzae* type b) and 3 Hepatitis B vaccines.

California Trend

	1998-1999	1999-2000	2000-2001
All	72.3%	70.7%	74.0%
African American	61.2%	N/A	N/A
Asian/Pacific Islander	72.8%	N/A	81.0%
Latino	68.9%	72.8%	73.2%
Native American	N/A	N/A	N/A
White/Other	80.9%	73.4%	72.3%

National Trend

	1998-1999	1999-2000	2000-2001
All	73.0%	73.7%	74.2%
African American	68.4%	68.3%	69.8%
Asian/Pacific Islander	73.2%	68.8%	76.0%
Latino	69.6%	70.9%	71.3%
Native American	74.7%	66.0%	71.3%
White	75.4%	76.6%	76.4%

State Rank: 34 out of 51.

Notes:

Some California figures by race/ethnicity are not available because the populations surveyed were too small to calculate reliable data. The ranking is based on the percentage of children of all races who have received the 4:3:1:3:3 vaccination series in all 50 states and the District of Columbia.

34th of 51
in the
nation

Lowest rate of early childhood immunizations

9. Child Health and Disability Prevention Program (CHDP)

This indicator measures the number of children and youth ages 0-20 served through the Child Health and Disability Prevention Program (CHDP) run by the Children's Medical Services Branch of the California Department of Health Services. CHDP is a preventive health program which provides critical periodic health services to low-income children in California.

California Trend

	1997-1998	1998-1999	1999-2000
Number of children served	2,285,697	2,228,361	2,228,326

Notes:

Because CHDP is a state-run program, it is not directly comparable to any national programs or programs in other states.

Sources:

1. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1997/98 CHDP data from confidential screening and billing forms (PM160), Table 53, July 1997-June 1998.
2. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1998/99 Summary CHDP data from confidential screening and billing forms (PM160), Table 72, July 1998-June 1999, 18 October 2001.
3. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1999/00 Summary CHDP data from confidential screening and billing forms (PM160), Table 72, July 1999-June 2000, 8 April 2002.

10. Dental Visits

This indicator measures the percentage of children ages 2-17 who had a dental visit in a one-year period.

National Trend: By Race/Ethnicity

	1997	1998	1999
All	72.7%	73.5%	72.6%
African American	68.8%	69.8%	67.6%
Asian/Pacific Islander	69.9%	67.9%	70.8%
Latino	61.0%	62.4%	59.3%
Native American	66.8%	72.6%	59.5%
White/Other	76.4%	77.1%	77.1%

National Trend: By Income

	1997	1998	1999
Family income up to 100% of FPL (\leq \$13,650)	62.0%	63.5%	57.8%
Family income 101%-200% of FPL (\$13,650-\$27,300)	61.6%	61.1%	61.6%
Family income greater than 200% of FPL (\$27,300 and up)	79.7%	80.3%	79.9%

Percentage of Children Ages 2-17 with Annual Dental Visit, United States, 1999

Notes:

These statistics come from the National Health Interview Survey (NHIS), which is unable to break down data by state. In the NHIS, a “dental visit” is defined as a visit to a dentist or a dental hygienist, including an orthodontist, oral surgeon or any other dental specialist. Federal Poverty Level (FPL) information is based on the 1998 Federal Poverty Guidelines for a family of three.

Sources:

- Centers for Disease Control and Prevention, National Center for Health Statistics, “Health, United States, 2001,” Table 80, <http://www.cdc.gov/nchs/products/pubs/pubd/hus/tables/2001/01hus80.pdf>, revised October 2001.

11. Fluoridated Water

This indicator measures the number of people of all ages that are receiving optimally fluoridated public drinking water, and gives this number as a percentage of all people served by public water systems.

California Trend

	1992	2000
Number	N/A	9,551,961
Percentage	15.7%	28.7%

National Trend

	1992	2000
Number	N/A	162,067,341
Percentage	62.1%	65.8%

State Rank: 46 out of 51.

Notes:

This ranking is based on 2000 data for all 50 states and the District of Columbia. These data are not available specifically for children, but it is assumed that children’s access to fluoridated water is similar to that of people of all ages. The Centers for Disease Control and Prevention conducted a fluoridation census in 1992 and developed a surveillance database called the Water Fluoridation Report System (WFRS) in 1998-2000; annual state-level data became available through the WFRS starting in the year 2000.

HOW CALIFORNIA MEASURES UP:

Lowest rate of children in poverty

Highest rate of children in poverty

1. Children in Poverty

This indicator measures the number and percentage of children ages 0-17 living at or below the federal poverty level (in 2000, an annual income of \$14,150 or less for a family of three).

California Trend

	1998	1999	2000
Number	2,183,000	1,892,000	1,843,000
Percentage	23.6%	20.3%	19.2%

National Trend

	1998	1999	2000
Number	13,467,000	12,109,000	11,553,000
Percentage	18.9%	16.9%	16.1%

State Rank: 43 out of 51.

Notes:

The ranking is based on a three-year average (1998-2000) of the percentage of children ages 0-17 living below the federal poverty level in all 50 states and the District of Columbia. The federal poverty level income limits referred to in this report are based on the Federal Poverty Guidelines issued annually in the *Federal Register* by the U.S. Department of Health and Human Services.

2. Children in Low-Income Families

This indicator measures the number and percentage of children living below 200% of the Federal Poverty Level (in 2000, an annual income of less than \$28,300 for a family of three).

California Trend

	1998	1999	2000
Ages 0-8: Number	2,417,000	2,390,000	2,190,000
Ages 0-8: Percentage	49.4%	49.5%	45.3%
Ages 0-17: Number	4,419,000	4,391,000	4,194,000
Ages 0-17: Percentage	47.0%	45.7%	43.6%

National Trend

	1998	1999	2000
Ages 0-8: Number	15,968,000	14,881,000	14,162,000
Ages 0-8: Percentage	44.0%	41.8%	40.1%
Ages 0-17: Number	29,419,000	28,303,000	26,892,000
Ages 0-17: Percentage	40.7%	39.2%	37.4%

State Rank: 42 out of 51.

Low-Income Children Ages 0-17 by Race/Ethnicity, California and United States, 2000

Notes: The ranking is based on state-level data that include 18-year-olds living in low income families.

Sources:

1. U.S. Census Bureau, "Low-Income Uninsured Children by State: 1998, 1999, and 2000," <http://www.census.gov/hhes/hlthins/liuc00.html>, Current Population Survey, March 1999-2001, revised January 24, 2002.
2. U.S. Census Bureau, Current Population Survey, March 1999, 2000, generated by Sarah Grossman-Swenson, using FERRET, <http://ferret.bls.census.gov/cgi-bin/ferret>, 6 June 2002.
3. U.S. Census Bureau, Current Population Survey, March 2001, generated by Stacy J. Lyons, using CPS SuppORT System, 30 May 2002.
4. U.S. Department of Health and Human Services, Assistant Secretary for Planning and Evaluation, "The 2000 HHS Poverty Guidelines," <http://aspe.hhs.gov/poverty/00poverty.htm>, revised 7 January 2002.

3. Children in Poor Working Families

This indicator measures the number and percentage of children ages 0-17 living in families in which one parent works at least 50 weeks per year, and the family income is at or below the Federal Poverty Level (in 2000, an annual income of \$14,150 or less for a family of three). Statistics are presented as three-year averages.

California Average: Parent Working Year-Round and At/Below 100% FPL

	1998-2000
Number of children	811,000
Percentage of all poor children	41.1%
Percentage of all children in California	8.9%

HOW CALIFORNIA MEASURES UP

Lowest rate of children in low-income families

42nd of 51 in the nation

Highest rate of children in low-income families

National Average: Parent Working Year-Round and At/Below 100% FPL

	1998-2000
Number of children	4,533,000
Percentage of all poor children	36.6%
Percentage of all children in the U.S.	6.6%

State Rank: N/R.

Notes:

The definition of a working parent includes full-time or part-time work, 50 weeks per year. Although part-time workers are included in this category, 88% of people who worked at least 50 weeks per year worked full time (35 hours per week or more).

4. Children in Low-Income Working Families

This indicator measures the number and percentage of children ages 0-17 living in families in which one parent works at least 50 weeks per year, and the family income is at or below 200% of the FPL (in 2000, an annual income of \$28,300 or less for a family of three). Statistics are presented as three-year averages.

California Average: Parent Working Year-Round and At/Below 200% FPL

	1998-2000
Number of children	2,462,000
Percentage of all low-income children	56.8%
Percentage of all children in California	27.1%

National Average: Parent Working Year-Round and At/Below 200% FPL

	1998-2000
Number of children	16,218,000
Percentage of all low-income children	57.5%
Percentage of all children in the U.S.	23.5%

State Rank: N/R.

Notes:

The definition of a working parent includes full-time or part-time work, 50 weeks per year. Although part-time workers are included in this category, 88% of people who worked at least 50 weeks per year worked full time (35 hours per week or more).

Sources:

1. U.S. Census Bureau, Current Population Survey, March 1999-2001, calculation by Urban Studies Institute, University of Louisville, unpublished data for *Kids Count Data Book* (Baltimore, MD: Annie E. Casey Foundation, 2002).

4. U.S. Census Bureau, Current Population Survey, March 2001, generated by Stacy J. Lyons, using CPS SuppORT System, 30 May 2002.

5. Families in Poverty

This indicator measures the percentage of families with children ages 0-17 living in poverty (in 2000, an annual income of \$14,150 or less for a family of three).

California Trend

	1998	1999	2000
All families	12.6%	10.8%	9.9%
Female-headed families	44.4%	36.5%	30.5%

National Trend

	1998	1999	2000
All families	10.0%	9.3%	8.6%
Female-headed families	40.9%	37.4%	35.1%

State Rank—All families: 40 out of 51.

State Rank—Female-headed families: 27 out of 46.

Notes:

The ranking for all families is based on a three-year average (1998-2000) of the percentage of families living below the Federal Poverty Level, and was calculated for all 50 states and the District of Columbia. The ranking for female-headed households is based on a three-year average (1998-2000) of the percentage of people in female-headed households with children living below the Federal Poverty Level; this ranking is based on 45 states and the District of Columbia, as 5 states had populations too small to be included in the rankings.

HOW CALIFORNIA MEASURES UP

Lowest rate of families in poverty

Highest rate of families in poverty

HOW CALIFORNIA MEASURES UP:

Highest median household income

Lowest median household income

6. Median Household Income

This indicator measures the yearly median income of households. Median household income divides the yearly income distribution of households into two equal groups, with half having incomes above the median and half having incomes below the median. Yearly income estimates are presented as two-year averages.

California Trend

	1997-1998	1998-1999	1999-2000
Yearly income	\$40,623	\$42,791	\$46,008

National Trend

	1997-1998	1998-1999	1999-2000
Yearly income	\$38,233	\$40,280	\$42,168

State Rank: 17 out of 51.

Notes:

The two-year median income averages are presented in dollars of the second year (i.e. the 1997-1998 two-year average is in 1998 dollars). The ranking is based on a three-year average of the incomes from 1998-2000 calculated by the U.S. Census Bureau, which takes into account inflation, and is based on 2000 dollars.

2. U.S. Census Bureau, Housing and Household Economic Statistics Division, "Money Income in the United States: 1999," Table E, Current

Population Survey, March 1999-2000, <http://www.census.gov/hhes/www/income99.html>, revised 26 September 2000.

3. U.S. Census Bureau, Housing and Household Economic Statistics Division, "Money Income in the United States: 2000," Table E, Current Population Survey, March 1999-2001, <http://www.census.gov/hhes/www/income00.html>, revised 19 March 2002.

7. Cost of Child Care

This indicator measures the average yearly cost of full-time licensed home care and center care for an infant (ages 0-1), a toddler (ages 2-5) and a school-aged child (ages 6 and up).

California Trend

	1999	2000	2001
Infant home care	\$5,752	\$5,908	\$6,396
Infant center care	\$8,112	\$8,521	\$9,404
Toddler home care	\$5,304	\$5,465	\$5,934
Toddler center care	\$5,683	\$5,930	\$6,394
School-aged home care	\$3,695	\$3,899	\$4,228
School-aged center care	\$3,872	\$3,981	\$4,277

State Rank: N/A.

Notes:

Comparable national data are not available. These data have been revised and may differ from previously published California Child Care Resource and Referral Network data. Full-time care for a school-aged child refers to care during the time outside of school hours and during the work day.

Source:

California Child Care Resource and Referral Network, "Average Annual Cost of Child Care," 1999-2001 Regional Market Rate Survey for California Child Care Providers, unpublished data, revised 23 July 2002.

8. Child Support

This indicator measures the number and percentage of cases in the state child support systems for which some money has been collected, and the average collection per case.

California Trend

	FY1999	FY2000
Number of cases with collections	766,733	797,793
Percentage of cases with collections	37.8%	39.3%
Average monthly collection	\$108	\$116

National Trend

	FY1999	FY2000
Number of cases with collections	6,103,779	7,232,243
Percentage of cases with collections	37.2%	41.6%
Average monthly collection	\$129	\$139

State Rank: 31 out of 49.

Notes:

The ranking is based on a two-year average (1999-2000) of data reported by 48 states and the District of Columbia on the percentage of cases with collections. These statistics show the number of collections as a percentage of all cases, rather than as a percentage of the number of cases in which orders for collection have been issued, recognizing that even cases without orders in place represent children awaiting support. The average monthly collection is presented per cases with orders for collection established.

HOW CALIFORNIA MEASURES UP

Highest rate of child support collections

Lowest rate of child support collections

9. Children's Participation in TANF

This indicator measures the number and percentage of children ages 0-19 receiving Temporary Assistance to Needy Families (TANF) during the given fiscal year.

California Trend

	FY1998	FY1999	FY2000
Ages 0-5: number of children receiving TANF	577,421	521,856	418,541
Ages 0-5: percentage of children receiving TANF	21.7%	18.8%	14.5%
Ages 0-19: number of children receiving TANF	1,503,866	1,381,384	1,008,720
Ages 0-19: percentage of children receiving TANF	14.6%	13.4%	9.6%

National Trend

	FY1998	FY1999	FY2000
Ages 0-19: number of children receiving TANF	6,329,970	5,318,722	4,384,527
Ages 0-19: percentage of children receiving TANF	8.0%	6.7%	5.5%

State Rank: N/R.

Notes:

California has the highest percentage of children receiving TANF out of all 50 states, with only the District of Columbia having a higher percentage of children receiving TANF. However, this indicator is not ranked because the high number of children receiving TANF reflects a high rate of child poverty in California, and correspondingly, a higher percentage of children eligible for TANF in California than in the United States as a whole. Determining the percentage of eligible children served by TANF is a calculation beyond the scope of this report.

10. Food Insecurity and Hunger

This indicator measures the number and percentage of children ages 0-17 in households that are food insecure, and the number and percentage of children in food insecure households in which one or more children experienced hunger over a one-year period. Households were classified as food insecure if they reported that they were uncertain of having enough food or unable to acquire enough food to meet basic needs for all members of the household. Households with hunger among children were identified by responses to questions about any of the children in the household reducing food intake and being hungry because there was not enough money for food. Statistics are presented as two-year averages.

California Average

	1998-1999
Number of children in food insecure households	2,158,000
Percentage of children in food insecure households	23.1%
Number of children in food insecure households with hunger among children	104,000
Percentage of children in food insecure households with hunger among children	1.1%

National Average

	1998-1999
Number of children in food insecure households	13,051,000
Percentage of children in food insecure households	18.3%
Number of children in food insecure households with hunger among children	613,000
Percentage of children in food insecure households with hunger among children	0.9%

State Rank: Worse than average.

Notes:

These data measure food insecurity and hunger that occurred as a result of a lack of money or other resources to obtain food; they do not measure voluntary fasting or dieting. Households are classified as food insecure if anyone in the household experienced the condition at any time during the 12 months prior to the food insecurity survey, making the annual rate higher than monthly or daily rates. The rates of food insecurity and hunger in a given month are estimated to be about 60% of the annual rate, and the rates on a given day are estimated to be about 13% to 18% of the annual rate. In California, an average of 37,000 households were food insecure with hunger among children in 1998-1999, and 104,000 children lived in those households. At least one child in these 37,000 households was hungry at some point during a one-year period.

11. Children Receiving WIC

This indicator measures the number of children ages 0-4 participating in the Women, Infants and Children Supplemental Nutrition Program (WIC). This program is available to women with infants and children who are living at or below 185% of the Federal Poverty Level (in 2002, an annual income of \$27,787 or less for a family of three).

California Trend

	2000	2001	2002
Number of children served	1,158,735	1,163,414	1,165,273

National Trend

	2000	2001	2002
Number of children served	5,455,648	5,562,718	5,651,879

State Rank: N/A.

Notes:

The California data are based on a June monthly count of infants and children served by WIC; the national data are based on a May monthly count. Because reliable data are not available on the percentage of eligible children served by WIC, this indicator is not ranked.

Sources:

1. California Department of Health Services, WIC Branch, "Infants and Children Served By WIC, California Counties, 2000-2002," unpublished data, 9 July 2002.
2. U.S. Department of Food and Agriculture, Food and Nutrition Services, "WIC Program Monthly Data," http://www.fns.usda.gov/pd/WIC_Monthly.htm, revised 24 July 2002.

12. Food Stamps

This indicator measures the percentage of eligible children (ages 0-4 and 0-17) served by the U.S. Department of Food and Agriculture Food Stamp Program.

National Trend

	1997	1998	1999
Percentage of eligible children served, ages 0-4	76.3%	70.3%	71.4%
Percentage of eligible children served, ages 0-17	75.5%	70.5%	67.7%

State Rank: N/A.

Notes:

State-level data are not available on the percentage of eligible children served by the Food Stamp Program. California ranks below average in the percentage of eligible individuals of all ages that participate in the Food Stamp Program (45.2% compared to 57.4% nationally in 1999).

Source:

Randy Rosso, Mathematica Policy Research, Inc., "Trends in Food Stamp Program Participation Rates: 1994 to 1999," Table III.2, <http://www.fns.usda.gov/oane/MENU/Published/FSP/Participation.htm> (Washington, D.C.: U.S. Department of Food and Agriculture, Food and Nutrition Services, October 2001), based on numbers from FSP Operations Data, FSPQC data, and U.S. Census Bureau, Current Population Survey, March 1998-2000.

13. Participation in the National School Breakfast Program

This indicator measures the number of children ages 5-17 living in families with incomes at or below 185% of the Federal Poverty Level (in 2001, an annual income of \$27,066 or less for a family of three), making them eligible for free or reduced-price meals in the National School Breakfast Program; the number of children who participated in the program; and finally, the percentage of eligible children who participated in the program.

California Trend

	FY1999	FY2000	FY2001
Number of eligible children	2,849,000	2,798,000	2,812,000
Number of eligible children served	784,460	771,089	769,690
Percentage of eligible children served	27.5%	27.6%	27.4%

National Trend

	FY1999	FY2000	FY2001
Number of eligible children	18,499,000	18,349,000	17,448,000
Number of eligible children served	6,294,692	6,360,336	6,484,735
Percentage of eligible children served	34.0%	34.7%	37.2%

State Rank: Worse than average.

Notes:

The number of children participating in the National School Breakfast Program is a nine-month average, based on the average number of daily meals multiplied by an attendance factor of 0.927 (a calculation done by the U.S. Department of Food and Agriculture, Food and Nutrition Service). The percentage of eligible children participating in the free and reduced-price National School Breakfast Program was determined by dividing the number of children receiving free or reduced-price breakfasts during the given school year by the number of children ages 5-17 living at or below 185% of the FPL (the family income guideline that determines eligibility for the free and reduced-price school nutrition programs).

14. Participation in the National School Lunch Program

This indicator measures the number of children ages 5-17 living in families with incomes at or below 185% of the Federal Poverty Level (in 2001, an annual income of \$27,066 or less for a family of three), making them eligible for free or reduced-price meals in the National School Lunch Program; the number of children who participated in the program; and finally, the percentage of eligible children who participated in the program.

California Trend

	FY1999	FY2000	FY2001
Number of eligible children	2,849,000	2,798,000	2,812,000
Number of eligible children served	1,974,205	1,938,028	1,999,339
Percentage of eligible children served	69.3%	69.3%	71.1%

National Trend

	FY1999	FY2000	FY2001
Number of eligible children	18,499,000	18,349,000	17,448,000
Number of eligible children served	15,521,084	15,553,516	15,648,541
Percentage of eligible children served	83.9%	84.8%	89.7%

State Rank: Worse than average.

Notes:

The number of children participating in the National School Lunch Program is a nine-month average, based on the average number of daily meals multiplied by an attendance factor of 0.927 (a calculation done by the U.S. Department of Food and Agriculture, Food and Nutrition Service). The percentage of eligible children participating in the free and reduced-price National School Lunch Program was determined by dividing the number of children receiving free or reduced-price lunches during the given school year by the number of children ages 5-17 living at or below 185% of the FPL (the family income guideline that determines eligibility for the free and reduced-price school nutrition programs).

15. Participation in Summer Nutrition Programs

This indicator measures the number and percentage of eligible children ages 5-17 served by the Summer Food Service Program (SFSP), a food program available to local community groups who are interested in combining a summer activity program with a child nutrition program, as well as children served by the National School Lunch Program (NSLP), which is available at select schools during the summer. Many school breakfast and lunch programs are unavailable during the summer months; the SFSP is designed to help fill the gap by providing food to low-income children in the summer.

California Trend

	FY1999	FY2000	FY2001
Number of eligible children	2,849,000	2,798,000	2,812,000
Number of eligible children served by SFSP	185,693	176,820	184,033
Number of eligible children served by summer NSLP	604,511	630,159	627,031
Percentage of eligible children served by SFSP	6.5%	6.3%	6.5%
Percentage of eligible children served by summer NSLP	21.2%	22.5%	22.3%
Percentage of eligible children served by SFSP and summer NSLP	27.7%	28.8%	28.8%

National Trend

	FY1999	FY2000	FY2001
Number of eligible children	18,499,000	18,349,000	17,448,000
Number of eligible children served by SFSP	2,172,137	2,103,629	2,115,230
Number of eligible children served by summer NSLP	1,064,655	1,136,074	1,184,190
Percentage of eligible children served by SFSP	11.7%	11.5%	12.1%
Percentage of eligible children served by summer NSLP	5.8%	6.2%	6.8%
Percentage of eligible children served by SFSP and summer NSLP	17.5%	17.7%	18.9%

RANK—SFSP: Worse than average.

RANK—NSLP: Better than average.

RANK—SFSP & NSLP: Better than average.

Notes:

The number of eligible children served by the SFSP is based on average daily attendance reported for July, the peak month of national program activity. Unlike participation data in the National School Breakfast and Lunch programs, average daily attendance in the SFSP is not adjusted for absenteeism, and so the numbers presented represent the maximum number of children who could have been served. Actual daily participation may have varied. FY 2001 data are preliminary and all data are subject to revision by the U.S. Department of Agriculture (USDA). The National School Lunch Program statistics are based on July 1999-2001 data from the USDA. The percentage of eligible children served was determined by dividing the number of children served into the total number of children ages 5-17 living at or below 185% of the Federal Poverty Level, which is the income eligibility guideline for the program. In 2001, 185% of the Federal Poverty Level was \$27,066 for a family of three, according to the U.S. Department of Health and Human Services federal poverty guidelines.

Other	24.6	N/A	N/A
White	53.7	52.3	47.9

National Trend: Rate for Ages 0-17

	1999	2000	2001
All	42.4	N/A	N/A

State Rank: 28 out of 51.

Child Abuse Rate per 1,000, Ages 0-17, California, 1999-2001

Notes:

The ranking is based on the rate of child abuse per 1,000 children ages 0-17 in 1999. It is based on state-level rates published by the U.S. Department of Health and Human Services, which differ from California rates computed by U.C. Berkeley from the California Department of Social Services' CWS/CMS database. The number of abused children is based on an unduplicated count of child abuse referrals, meaning that a child receiving one or more referrals is counted only once per calendar year. In the 1999 data, "Other" includes Asian American, Pacific Islander and Native American children.

Ages 0-18: Rate per 1,000	7.5	7.7	7.3

State Rank: N/A.

Notes:

This indicator is not ranked because the national and California data are not directly comparable. The national data are based on a point-in-time estimate of the number of children in foster care on September 30 of 1998, 1999 and 2000 respectively. All national data have been revised from preliminary to interim data; none of the national data have been finalized and are still subject to revision.

State Rank: Worse than average.

HOW CALIFORNIA MEASURES UP

Lowest rate of motor vehicle deaths

Highest rate of motor vehicle deaths

Notes:

The ranking is based on the child mortality rate per 100,000 children ages 0-19 for 1998-1999. California averaged 61.6 deaths per 100,000 children, while nationally, the average was 55.9 deaths per 100,000 children.

HOW CALIFORNIA MEASURES UP

Lowest rate of incarcerated juveniles

48th of 51 in the nation

Highest rate of incarcerated juveniles

Incarcerated Juveniles, Rate per 100,000 by Race/Ethnicity, California and United States, 1999

State Rank: 48 out of 51.

Notes:

The ranking is based on the 1999 rate of incarcerated juveniles for 50 states and the District of Columbia. California ranked 36th among 37 states and the District of Columbia where the upper age limit is age 17 for juvenile court adjudication. In three states, the upper age limit is age 15, while in 10 states the upper age limit is age 16.

9. High School Dropouts

This indicator measures the number and percentage of public school students in grades 9-12 who leave school over the course of one year and do not enroll in a different school or notify the school of a change of residence. These are annual rates; the cumulative effect of a 2.8% annual dropout rate is that 11.2% of students drop out over a four-year period.

	1998-2001 Average Number of Dropouts	1998-2001 Average Percentage	1998-2001 Rank	1998-1999 Percentage	1999-2000 Percentage	2000-2001 Percentage		1998-2001 Average Number of Dropouts	1998-2001 Average Percentage	1998-2001 Rank	1998-1999 Percentage	1999-2000 Percentage	2000-2001 Percentage

11. Fair Market Rent

This indicator shows the Fair Market Rent (FMR), set by the U.S. Department of Housing and Urban Development, that represents the estimated monthly rent for a modest two-bedroom apartment. Additionally, it shows the 2002 FMR as a percentage of the monthly earnings of a family of three living at 200% of the Federal Poverty Level (FPL).

	2000 FMR 2-Bedroom Apartment	2001 FMR 2-Bedroom Apartment	2002 FMR 2-Bedroom Apartment	2000-2002 Rank	2002 FMR as % of mo. earnings of family at 200% of the FPL		2000 FMR 2-Bedroom Apartment	2001 FMR 2-Bedroom Apartment	2002 FMR 2-Bedroom Apartment	2000-2002 Rank	2002 FMR as % of mo. earnings of family at 200% of the FPL

15. Children Participating in WIC

This indicator measures the number of children (ages 0-4) participating in the Women, Infants and Children Supplemental Nutrition Program (WIC). This program is available to women with infants and children who are living at or below 185% of the Federal Poverty Level (in 2002, an annual income of \$27,787 or less for a family of three).

Notes and Sources on page 92.

County Charts Notes and Sources

1. Percentage of Infants Born to Teen Mothers

Notes:

An asterisk indicates that there were 10 or fewer teen births, or that rates would be based on 10 or fewer teen births. Fifty-five counties are ranked.

Source:

California Department of Health Services, Vital Statistics, Birth Records, "Table 2-20. Number and Percent of Live Births to Teen Mothers, California Counties, 1990-2000," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 28 April 2002.

2. Infants Born to Mothers with Less Than 12 Years of Education

Notes:

An asterisk indicates that there were 10 or fewer births to mothers with less than 12 years of education, or that rates would be based on 10 or fewer of such births. Fifty-six counties are ranked.

Sources:

1. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 1998," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

2. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 1999," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

3. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 2000," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

3. Infants Born to Fathers with Less Than 12 Years of Education

Notes:

An asterisk indicates that there were 10 or fewer births to fathers with less than 12 years of education, or that rates would be based on 10 or

fewer of such births. Fifty-six counties are ranked. The father's education level was unknown for 9% of infants; these infants were excluded in calculating percentages.

Sources:

1. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 1998," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

2. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 1999," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

3. California Department of Health Services, Vital Statistics, Birth Records, "Table 2-38, Live Births by Mother's Education, California Counties and Selected City Health Departments, 2000," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 22 April 2002.

4. Standardized Testing and Reporting (STAR): Second Grade Reading

Notes:

An asterisk indicates that there were 10 or fewer students tested or that rates would be based on 10 or fewer students. Fifty-seven counties are ranked. The percentage at or above the 50th NPR is used to report group performance on California's STAR test. The data presented here tell what percentage of the students in each county and in California performed at or above the national average.

Sources:

1. California Department of Education, "STAR Score Summaries Report for All Students, Spring 1999," <http://star.cde.ca.gov/star99/reports/English.html>, revised 15 May 2000.

8. Graduates Prepared for College

Notes:

An asterisk indicates that there were 10 or fewer graduates, or that rates would be based on 10 or fewer graduates. Fifty-seven counties are ranked.

Sources:

1. California Department of Education, Educational Demographics Unit, "Numbers of 12th Grade Graduates in California Public Schools Completing All Courses Required for U.C. and/or C.S.U. Entrance By County, By Gender and By Ethnic Group for the Year 1998-99," <http://data1.cde.ca.gov/dataquest/>, accessed 21 March 2002.
2. California Department of Education, Educational Demographics Unit, "Numbers of 12th Grade Graduates in California Public Schools Completing All Courses Required for U.C. and/or C.S.U. Entrance By County, By Gender and By Ethnic Group for the Year 1999-00," <http://data1.cde.ca.gov/dataquest/>, accessed 21 March 2002.
3. California Department of Education, Educational Demographics Unit, "Numbers of 12th Grade Graduates in California Public Schools Completing All Courses Required for U.C. and/or C.S.U. Entrance By County, By Gender and By Ethnic Group for the Year 2000-01," <http://data1.cde.ca.gov/dataquest/>, accessed 21 March 2002.

9. High School Dropouts

Notes:

An asterisk indicates that there were 10 or fewer dropouts, or that rates would be based on 10 or fewer dropouts. Fifty-three counties are ranked.

Sources:

1. California Department of Education, Educational Demographics Unit, "Dropouts as a Percent of Enrollment (Grades 9-12) in California Public Schools By County and Ethnic Group for the Year 1998-99," <http://data1.cde.ca.gov/dataquest/>, accessed 3 June 2002.
2. California Department of Education, Educational Demographics Unit, "Dropouts as a Percent of Enrollment (Grades 9-12) in California Public Schools By County and Ethnic Group for the Year 1999-00," <http://data1.cde.ca.gov/dataquest/>, accessed 3 June 2002.
3. California Department of Education, Educational Demographics Unit, "Dropouts as a Percent of Enrollment (Grades 9-12) in California Public Schools By County and Ethnic Group for the Year 2000-01," <http://data1.cde.ca.gov/dataquest/>, accessed 3 June 2002.

10. Children Living in Poverty

Notes:

An asterisk indicates that due to small numbers, accurate rates cannot be calculated. Fifty-two counties are ranked. This indicator measures the number of children in related families who live in poverty; it does not include children in foster care or in group homes. The demographic data used to calculate percentages are based on projections from the 1990 Census computed by the California Department of Finance. These estimates do not take into account 2000 Census data.

Sources:

1. U.S. Census Bureau, Housing and Household Economic Statistics Division, Small Area Estimates Branch, "Small Area Income and Poverty Estimates, 1998," http://www.census.gov/housing/sa/pe/estmod98/est98_CA.dat, revised 20 December 2001.
2. California Department of Finance, "Race/Ethnic Population with Age and Sex Detail, 1970-2040" (Sacramento, CA: December 1998), <http://www.dof.ca.gov/HTML/DEMOGRAP/Race.htm>.

11. Fair Market Rent

Notes:

The U.S. Department of Housing and Urban Development (HUD) annually estimates Fair Market Rents (FMRs) for 354 metropolitan areas

and 2,350 nonmetropolitan county FMR areas. FMRs are generally set at the 40th percentile of rental costs in a given FMR area, and they are used to determine the eligibility of rental housing units for the Section 8 Housing Assistance Payments program. Section 8 Rental Certificate program participants cannot rent units whose rents exceed the FMR. In 2001, a policy change allowed the FMR to be set at the 50th percentile of rental costs in some FMR areas. In California, these cities included Oakland, Orange City, Sacramento, San Diego, San Jose and Ventura. FMRs are gross rent estimates. They include the cost of the shelter rent plus the cost of all utilities, except telephones.

15. Children Participating in WIC

Notes:

These data are based on a June monthly count of infants and children (ages 0-4) served by WIC. An asterisk indicates that 10 or fewer children were served by WIC.

Source:

California Department of Health Services, WIC Branch, "Infants and Children Served By WIC, California Counties, 2000-2002," unpublished data, 9 July 2002; 21 August 2002.

16. Teen Birth Rate

Notes:

An asterisk indicates that there were 10 or fewer teens births, or that rates would be based on 10 or fewer teen births. Fifty-five counties are ranked. The 1998 and 1999 county demographic data used to calculate teen birth rates are based on projections from the 1990 Census computed by the California Department of Finance; these estimates do not take into account 2000 Census data. The 2000 data, and all three years of California state totals, are based on the 2000 Census. Changes in county teen birth rates from 1999 to 2000 may be due, in part, to a more accurate count of the teen population. Updated demographic information for 1998 and 1999 will not be available until January 2003.

Sources:

1. State of California, Department of Health Services, Birth Records, "Table 2-20. Number and Percent of Live Births to Teen Mothers, California Counties, 1990-2000," <http://www.dhs.ca.gov/hisp/chs/OHIR/vssdata/tables.htm>, accessed 28 April 2002.

17. Child Health and Disability Prevention Program (CHDP)

Notes:

California totals for each fiscal year are higher than the sum of the county totals because some children received CHDP services but their county location was not reported to the California Department of Health Services.

Sources:

1. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1997/98 CHDP data from confidential screening and billing forms (PM160), Table 53, July 1997-June 1998.

2. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1998/99 Summary CHDP data from confidential screening and billing forms (PM160), Table 72, July 1998-June 1999, revised 18 October 2001.

3. California Department of Health Services, Children's Medical Services, Child Health and Disability Prevention Program, "CHDP Children Served by Source and County/City," FY 1999/00 Summary CHDP data from confidential screening and billing forms (PM160), Table 72, July 1999-June 2000, revised 8 April 2002.

18. Child Abuse

Notes:

The number of abused children is based on an unduplicated count of child abuse referrals, meaning that a child receiving one or more referrals is counted only once per calendar year. The demographic data used to calculate rates per 1,000 children for the counties are based on projections from the 1990 Census computed by the California Department of Finance; these estimates do not take into account 2000 Census data. California totals are based on numbers that take into account the 2000 Census, and may be higher than the sum of the county totals, as the county location was unknown for some referrals.

19. Children Ages 0-5 in Foster Care**Notes:**

An asterisk indicates that there were 10 or fewer children in foster care, or that rates would be based on 10 or fewer children in foster care. Fifty-four counties are ranked. The 1998 and 1999 county demographic data used to calculate foster care rates are based on projections from the 1990 Census computed by the California Department of Finance; these estimates do not take into account 2000 Census data. The 2000 data, and all three years of California state totals, are based on the 2000 Census. Changes in county foster care rates from 1999 to 2000 may be due, in part, to a more accurate count of the child population. Updated demographic information for 1998 and 1999 will not be available until January 2003.

Demographics

Children's Critical Early Years

1. Children Ages 0-17

California Statistics

	2000	
	Number	Percentage
All	9,249,829	100.0%
African American	653,820	6.9%
Asian/Pacific Islander	887,553	11.5%
Latino	4,050,825	39.8%
Multiracial	361,082	3.5%
Native American/Alaskan Native	49,112	0.6%
Other	24,579	0.2%
White	3,222,858	37.5%

National Statistics

	2000	
	Number	Percentage
All	72,293,812	100.0%
African American	10,610,264	14.7%
Asian/Pacific Islander	2,529,773	3.5%
Latino	12,342,259	17.1%
Multiracial	1,906,192	2.6%
Native American/Alaskan Native	685,911	0.9%
Other	192,326	0.3%
White	44,027,087	60.9%

Notes:

In order to extrapolate the number of children of Latino ancestry, it was necessary to exclude children of Latino ancestry from all other racial categories so as to not count children more than once. (The Census asks about race and Latino/Hispanic ancestry separately, and does not consider Latino/Hispanic ancestry a racial category.) Had people of Latino ancestry been included in the Multiracial category, 7.3% of children in California would have been Multiracial (rather than 3.9%), and 1.2% of children would have been Native American/Alaskan Native (rather than 0.5%).

Children Ages 0-4 by Race/Ethnicity, United States, 2000

4. Household Living Arrangements of Children Ages 0-17

These demographic statistics measure the number and percentage of children living in married-couple families and single-parent families.

California Trend

	1990		2000	
	Number	Percentage	Number	Percentage
Households with children ages 0-17	3,614,955	100.0%	4,380,013	100.0%
Married-couple families	2,752,645	76.1%	3,000,282	68.5%
Single-parent families	862,310	23.9%	1,379,731	31.5%
• Single male parent	200,612	5.5%	339,471	7.8%
• Single female parent	661,698	18.3%	1,040,260	23.8%

National Trend

	1990		2000	
	Number	Percentage	Number	Percentage
Households with children ages 0-17	31,364,670	100.0%	37,110,028	100.0%
Married-couple families	24,224,117	77.2%	25,278,327	68.1%
Single-parent families	7,140,553	22.8%	11,831,701	31.9%
• Single male parent	1,275,406	4.1%	2,600,627	7.0%
• Single female parent	5,865,147	18.7%	9,231,074	24.9%

Notes:

These data include related children living in households, and not include data on children in group quarters or foster care. Related children include children living with parents, grandparents and other relatives.

Sources:

1. U.S. Census Bureau, 1990 Summary Tape File 3 (STF 3), <http://factfinder.census.gov>, Table P019, 1 April 1990.
2. U.S. Census Bureau, 2000 Census Supplementary Survey, <http://factfinder.census.gov>, Table P012, accessed 28 June 2002.

5. Children with Working Parents

These demographic statistics measure the number of children who live with two parents who both work or with a single parent who works.

California Statistics

Ages 0-6	2000
Total number of children	2,866,937
Total number of children with working parents	1,585,016
Percentage	55.3%

Ages 6-17	2000
Total number of children	5,652,816
Total number of children with working parents	3,612,259
Percentage	63.9%

Ages 0-17	2000
Total number of children	8,519,753
Total number of children with working parents	5,197,275
Percentage	61.0%

National Statistics

Ages 0-6	2000
Total number of children	21,767,989
Total number of children with working parents	13,155,053
Percentage	60.4%

Ages 6-17	2000
Total number of children	45,512,174
Total number of children with working parents	31,495,979
Percentage	69.2%

Ages 0-17	2000
Total number of children	67,280,163
Total number of children with working parents	44,651,032
Percentage	66.4%

Notes:

A working parent is defined as one who is part of the workforce. There is no minimum number of hours required, so the parents included in the tables above include full-time and part-time workers. These statistics include only parents' own children, so the total numbers of children in the tables above are less than the total numbers in California and the nation, respectively, as they do not include children living with other relatives or in foster care.

Sarah Grossman-Swenson authored *California: The State of Our Children 2002* under the direction of Jayleen Richards and Amy Dominguez-Arms. The report was researched by Elizabeth Cushing Payne and Sarah Grossman-Swenson. Research assistants included Catherine Heppler, Melita Love and Dawn M. Riley. Leonard Finocchio, Alicia Jones, Shirin Shoai, Catherine Teare and Colette Washington provided valuable assistance in the production of the report.

Children Now gratefully acknowledges the Annie E. Casey Foundation for generously supporting the production and printing of this report.

We would also like to acknowledge The California Endowment, The Clorox Company Foundation, Gap Foundation, Miriam and Peter Haas Fund, The William Randolph Hearst Foundation, J.P. Morgan Chase, Northern California Contributions Committee, and The David & Lucile Packard Foundation for their support of our work.

ABOUT CHILDREN NOW

Children Now is a research and action organization dedicated to assuring that children grow up in economically secure families, where parents can go to work confident that their children are supported by quality health coverage, a positive media environment, a good early education, and safe, enriching activities to do after school. Recognized for its expertise in media as a tool for change, Children Now designs its strategies to improve children's lives while at the same time helping America build a sustained commitment to putting children first. Children Now is an independent, nonpartisan organization.
