Data Source: California Department of Public Health, Center for Family Health, Genetic Disease Screening Program, Newborn Screening Data, 2007  
Prepared by: California Department of Public Health, Center for Family Health, Maternal, Child and Adolescent Health Program

Note 1: All nonmilitary hospitals providing maternity services are required to complete the Newborn Screening Test Form.

Infant feeding data presented in this report include all feedings since birth to time of specimen collection, usually 24 to 48 hours since birth.

Upon completing the form, staff must select one of the following five categories to describe 'all feedings since birth' (not including water feedings):

(1) Breast only; (2) Formula only; (3) Breast and Formula; (4) TPN/Hyperal and (5) Other.

Cases reported on the Newborn Screening Test Form NBS-I(C) (6/07), were excluded from analysis (n=2,045; 0.4%).

Note 2: The numerator for "Exclusive Breastfeeding" includes records marked 'Breast Only'. The numerator for "Any Breastfeeding" includes records marked as either 'Breast Only' or 'Breast and Formula'. The denominator excludes cases with unknown method of feeding and cases marked as TPN/Hyperal or Other. Statewide approximately 5.0% of cases have missing feeding information, 1.1% are coded as TPN/Hyperal and 1.1% are coded as Other.

Note 3: Infant race/ethnicity is based upon mother and father race/ethnicity as reported on the birth certificate and recorded on the Newborn Screening Test Form. Data for individual race groups exclude persons of Hispanic ethnicity.

Note 4: Data shown for facilities listed as 'Kaiser', 'Pediatric', and 'Regular Maternity' in the newborn screening database.

Note 5: Facility and county of occurrence data are missing for 1.7% of cases, but are included in the state total.

Note 6: Counties and facilities with fewer than 50 births with known type of feeding are not shown. Data for counties shown in this table include information for all births occurring in that county.

Note 7: Data for cases with unknown race/ethnicity are not shown, but are included in the totals.

Note 8: 95% confidence intervals are shown in parentheses. Confidence intervals were computed using the Wilson Score formula.

Newcombe, R.G. (1998). Two-sided confidence intervals for the single proportion: comparison of seven methods. *Statistics in Medicine*, 17: 857-872.
