

TABLE 1-4. COMPARISON OF VITAL STATISTICS RATES, CALIFORNIA AND UNITED STATES, 1980-2005 (By Place of Residence)

(Birth rates are live births per 1,000 female population in specified age group. General fertility rates are live births per 1,000 women of childbearing age (15-44 years). Total fertility rate is the sum of birth rates for 5-year age groups (age 15-44) multiplied by 5. Age-adjusted death rates are calculated using Year 2000 U.S. standard population; infant and neonatal mortality rates are per 1,000 live births.)
