**APPENDIX C** - Summary of Public Water System Violations (By Violation Category in each County)

**APPENDIX D** - Local Primacy Agencies

**CALIFORNIA DEPARTMENT OF PUBLIC HEALTH  
DRINKING WATER PROGRAM  
ANNUAL COMPLIANCE REPORT  
FOR  
PUBLIC WATER SYSTEMS  
CALENDAR YEAR 2006**

**SECTION I      INTRODUCTION**

California had an estimated 7,745 public water systems at the end of 2006. These water systems served approximately 36.6 million of the estimated 37.7 million people throughout the state. The remaining estimated 1.1 million people in the state received their drinking water from private wells serving individual residences, and from other sources. Public water systems are regulated and monitored through the State Drinking Water Program.

**THE DRINKING WATER PROGRAM OVERVIEW**

Under the 1974 Federal Safe Drinking Water Act (SDWA) and subsequent amendments in 1986 and 1996, the U.S. Environmental Protection Agency (EPA) set national limits on contaminant levels in drinking water for human consumption to provide public safety. These limits are known as Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs). For some regulations, treatment techniques were established in lieu of an MCL to control unacceptable levels of contaminants in water. To assist in providing data for future regulatory development, Public Water Systems (PWSs) are also required to monitor for unregulated contaminants. PWSs are also regulated as to the frequency for monitoring and reporting of results for contaminants to the states or EPA. PWSs must notify their consumers when they have violated these regulations by including a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of alternative water supplies available during the violation.

EPA designated the California Department of Public Health (CDPH) as the primacy agency responsible for the administration and enforcement of the SDWA requirements in California. On July 1, 2007 the Department of Health Services split into two Departments and the State's Drinking Water Program became apart of CDPH. CDPH have adopted statutes and regulations to implement the requirements of the SDWA. CDPH's regulatory responsibility over public water systems include: issuance of operating permits, conducting inspections, monitoring for compliance with regulations, and taking enforcement action to compel compliance when violations are identified.

CDPH has delegated (given primacy of) the drinking water program regulatory authority for small public water systems serving less than 200 service connections to 36 counties in California. The delegated counties (Local Primacy Agencies) are responsible for regulating approximately 4,580 small public water systems statewide. CDPH retains the regulatory authority over the remaining public water systems statewide with 200 or more service connections and the small public water systems in the remaining 22 non-delegated counties. A list of the delegated counties is included in the appendices to this report.

Each quarter, CDPH submits data to the Safe Drinking Water Information System (SDWIS/FED), an automated database maintained by EPA. The data submitted includes: PWSs inventory information; incidents of violations for MCLs, MRDLs, monitoring, reporting, and treatment techniques; violations concerning public and consumer notification; and information on enforcement activity related to these violations. In addition, CDPH provides EPA with this Annual Compliance Report of violations of the primary drinking water standards. This report provides the numbers of violations in each of six areas: MCLs, MRDLs, treatment techniques, variances and exemptions, significant monitoring violations, and significant consumer notification violations.

During the calendar year 2006, CDPH experienced technical problems in the electronic transmittal of water quality and violations data into the SDWIS for use in the 2006 Annual Compliance Report. As a result, the information available from the federal SDWIS is considered incomplete and does not accurately reflect the status of drinking water compliance in California. CDPH is working with EPA to resolve the data transfer issues and problems to ensure the completeness and accuracy of the SDWIS data in the future. Consequently, violation information included in this Annual Compliance Report is derived from the data available from CDPH's independent drinking water program database system for the period of January 1, 2006 through December 31, 2006.

A copy of this 2006 Annual Compliance Report will be available to the public by contacting CDPH's Division of Drinking Water and Environmental Management Drinking Water Program at (916) 449-5600, or through CDPH's website at: <http://www.cdph.ca.gov/certlic/drinkingwater/Pages/Publications.aspx>.

## **PURPOSE AND AUTHORITY**

SDWA requires States with primacy to prepare and publish an annual report of the compliance of public water systems. Specifically, Section 1414(c)(3)(A)(i) states:

*“Not later than January 1, 1998, and annually thereafter, each State that has primary enforcement responsibility under section 1413 shall prepare, make readily available to the public, and submit to the Administrator an annual report on violations of national primary drinking water regulations by public water*

*systems in the State [the Annual Compliance Report], including violations with respect to (I) maximum contaminant levels, (II) treatment requirements, (III) variances and exemptions, and (IV) monitoring requirements determined to be significant by the Administrator after consultation with the States.”*

Section 1414(c)(3)(A)(ii) further states:

*“The State shall publish and distribute summaries of the report and indicate where the full report is available for review.”*

## **SECTION II     DEFINITIONS**

Specific words and phrases used in this Annual Compliance Report have specific meanings. These are defined as follows.

### **▪ PUBLIC WATER SYSTEM**

A Public Water System (PWS) is defined as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. There are three types of PWSs. PWSs can be community (such as towns), nontransient noncommunity (such as schools or factories), or transient noncommunity systems (such as rest stops or parks). For purposes in this report, a PWS means systems of all types unless specified in greater detail.

### **▪ MAXIMUM CONTAMINANT LEVEL**

Primary drinking water standards have been adopted by CDPH for contaminants that may be found in drinking water supplies in California. The standards are set at levels necessary to protect the public from acute and chronic health risks associated with consuming the contaminants in the drinking water supplies. These limits are known as Maximum Contaminant Levels (MCLs). PWSs are required to serve drinking water that meets all drinking water standards, and to conduct routine sampling and analysis of their drinking water supplies to certify compliance. Further, all water quality analysis must be conducted by laboratories that are certified by CDPH and the analytical results transmitted electronically to CDPH. The water quality analytical results are reviewed and evaluated by CDPH to determine compliance with drinking water standards. CDPH identifies and reports violations when PWSs submit water quality analytical results that exceed the established drinking water standards.

### **▪ MAXIMUM RESIDUAL DISINFECTANT LEVEL**

Limits have also been set for residual disinfectant levels in drinking water to reduce the risk of exposure to disinfectant byproducts formed, when public water systems add

chemical disinfectant for either primary or residual treatment. These limits are known as Maximum Residual Disinfectant Levels (MRDLs).

- **TREATMENT TECHNIQUES**

For some regulations, treatment techniques (TTs) were established in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, some bacteria, and turbidity.

- **VARIANCES AND EXEMPTIONS**

CDPH is authorized under the federal SDWA to issue variances and exemptions from meeting drinking water standards to public water systems under special circumstances.

A variance is allowed in situations where the characteristics of a raw water source make it impossible for a public water system to meet the MCL with the installation of the best available technology, treatment techniques, or other approved method. The approval of any variance must ensure adequate protection of human health. Additionally, the variance is reviewed by CDPH not less than every five years to determine whether continuation of the variance is appropriate and necessary.

An exemption from an MCL and/or treatment technique is allowed in situations where a public water system is in noncompliance as the result of compelling factors and the exemption will not result in an unreasonable risk to public health. Any public water systems that receive an exemption must achieve compliance with the MCL or treatment technique as expeditiously as practicable, but not later than three years after the applicable compliance date.

- **MONITORING AND REPORTING**

A PWS is required to monitor and verify the levels of contaminants present in the water do not exceed the MCL. A monitoring violation occurs when a PWS fails to have its water tested as required or fails to report test results correctly to the primacy agent.

- **SIGNIFICANT MONITORING OR REPORTING VIOLATIONS**

For this report, significant monitoring violations are defined as any significant monitoring violation that occurred during the 2006 calendar year. A Significant monitoring violation, with rare exceptions, occurs when no samples were taken or no results were reported.

- **PUBLIC NOTIFICATION VIOLATIONS**

Unless otherwise directed by CDPH, water suppliers are required to notify CDPH and the persons served by the water system whenever any of the following occurs: the

water supplied to the consumers exceeds the MCLs for coliform bacteria, inorganic chemicals, nitrate, turbidity, trihalomethanes, radioactivity, organic chemicals; or the water supplier fails to comply with a prescribed treatment technique established in lieu of an MCL; or the water supplier violates any schedule prescribed pursuant to a variance or exemption. A violation occurs when there is a failure to provide the required notification.

- **CONSUMER NOTIFICATION**

All Community Water Systems are required to deliver to their customers a brief annual water quality report. The report is to include educational material, provide information on the source water(s), levels of any detected contaminants, and any compliance issues with the drinking water regulations.

- **SIGNIFICANT CONSUMER NOTIFICATION VIOLATIONS**

For this report, a significant consumer notification violation occurred if a community water system completely failed to provide its customers the required annual Consumer Confidence Report, also known as the Annual Water Quality Report.

### **SECTION III VIOLATION CATEGORY SUMMARY**

The 2006 Annual Compliance Report lists violations by the following categories: Inorganic Contaminants; Synthetic Organic Contaminants; Volatile Organic Contaminants; Radionuclide Contaminants; Total Coliform Rule (TCR) violations; Disinfectant & Disinfection By Product Rule (Stage1 DBPR) violations; Surface Water Treatment Rule (SWTR) and Enhanced Surface Water Treatment Rule (ESWTR) violations; Filter Backwash Recycle Rule (FBRR) violations; Lead and Copper Rule (LCR) violations; Public Notification violations; Consumer Confidence Report Notification violations; and variance and exemption violations. The summary of violations for each category is listed in Appendix A to this report. The table in Appendix A provides the number of violations and PWSs responsible for the reported MCL/MRD/TT or monitoring and reporting violations for each contaminant or Rule within each category. The table indicates relative compliance with a contaminant or Rule on a statewide basis. Appendix B to this report provides a table listing the individual violations within each category, sorted according to the violation type, (either a MCL or monitoring violation), then contaminate name. The table indicates the number of PWSs, and their respective populations, responsible for the reported MCL/MRD/TT or monitoring and reporting violations for each category. The table indicates relative compliance to specific contaminants by PWSs and is used to review annual compliance trends. The table also indicates the population effected by violation categories. Appendix C to this report provides a table listing individual violations according to each county, and is then sorted by the PWS number. This table is used for the same purposes as Table B but by each county instead of on a statewide basis. The table also

sums up the population effected by each violation types. All three tables provide two rows of counts and totals to provide a comparison when individual PWSs and their population are counted once within each grouping when they have violations for multiple contaminants within the group.

A discussion of violations for each category follows:

- **INORGANIC CONTAMINANTS**

PWSs were required to meet primary drinking water standards and monitoring and reporting requirements for 17 inorganic contaminants. The table in Appendix A indicates 120 MCL violations incurred for 6 of the 17 inorganic contaminants, and 330 monitoring or reporting violations incurred for 12 of the inorganic contaminants. The number of inorganic contaminant MCL violations for the year 2006 increased by 19, or 19 percent, from the previous year. This increase was mainly due to Nitrate violations. Similarly, the number of monitoring and reporting violations increased by 224, or 311 percent, due primarily again to Nitrate monitoring violations.

The table in Appendix B indicates the 120 inorganic contaminant MCL violations were issued to 72 PWSs, a 99.1 percent compliance by all PWSs. An estimated population of 124,608 people was exposed to inorganic MCL contamination during the year, or 0.34 percent of the state population served by PWSs.

Of the 120 inorganic MCL violations, 14 were for Arsenic, 99 were for Nitrate, three for Nitrite and four were for three other inorganic contaminants. Nitrate and Nitrite are used in fertilizer and are found in sewage and wastes from human and/or farm animals and generally gets into drinking water from those activities. Excessive levels of Nitrate and Nitrite in drinking water have caused serious illness and sometimes death in infants less than six months of age. The serious illness in infants is caused because Nitrate is converted to Nitrite in the body. Nitrite interferes with the oxygen carrying capacity of the child's blood. This is an acute disease in that symptoms can develop rapidly in infants. In most cases, health deteriorates over a period of days. Symptoms include shortness of breath and blueness of the skin. Expert medical advice and an alternate source of drinking water are recommended under these conditions. Local and State health authorities are the best sources for information concerning alternate sources of drinking water for infants. CDPH has set the drinking water standard at 45 ppm Nitrate (as Nitrate) and 1 ppm for Nitrite (as Nitrogen) to protect against the risk of these adverse effects. Drinking water that meets the CDPH standards is associated with little to none of this risk and is considered safe with respect to Nitrate and Nitrite.

14 of the 120 MCL violations for inorganic contaminants were for Arsenic. The major sources of Arsenic in drinking water are from erosion of natural deposits. Other sources of Arsenic may include runoff from orchards, and wastes from glass and electronics production. Some people who drink water containing Arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system,

and may have an increased risk of getting cancer. CDPH set the drinking water standard for Arsenic at 0.050 ppm to reduce these risks. (Note: although not reflected in the data for this 2006 report, the EPA lowered the Arsenic MCL to 0.010 ppm on January 26, 2006. CDPH has proposed and submitted a regulatory revision to lower the California MCL to 0.010 ppm. However, the standard has not yet been adopted.)

Of the four remaining MCL violations, one was for Aluminum, one was for Cadmium, and two were for Fluoride. Major sources of Fluoride in drinking water are from erosion of natural deposits, water additive that promotes strong teeth, and discharges from fertilizer and Aluminum factories. Some people who drink water containing Fluoride in excess of the federal MCL of 4 ppm over many years may get bone disease, including pain and tenderness of the bones. To protect people from the adverse effects of dental fluorosis, the state has set the MCL at 2 ppm.

Cadmium is a contaminant in metals used to galvanize pipe. It generally gets into water by corrosion of galvanized pipes or by improper waste disposal. Food and the smoking of tobacco are other common sources of general exposure to this contaminant. This chemical has been shown to damage the kidney in animals such as rats and mice when the animals are exposed at high levels over their lifetimes. Some industrial workers who were exposed to a relatively large amount of this chemical during working careers also suffered damage to the kidney. CDPH has set the drinking water standard for Cadmium at 0.005 ppm to protect against the risk of these adverse health effects. Drinking water that meets the CDPH standard is associated with little to none of this risk.

Major sources of Aluminum in drinking water are from erosion of natural deposits and residue from some surface water treatment processes. Some people who drink water containing Aluminum in excess of the MCL over many years may experience short-term gastrointestinal tract effects. CDPH has set the drinking water standard for Aluminum at 1 ppm to protect against the risk of these adverse health effects. There is no federal MCL for Aluminum.

#### ▪ **SYNTHETIC ORGANIC CONTAMINANTS**

PWSs are required to meet primary drinking water standards and monitoring and reporting requirements for 33 synthetic organic contaminants (SOCs). The table in Appendix A indicates five MCL violations and three monitoring or reporting violations occurred for Dibromochloropropane (DBCP), one of the 33 SOC contaminants. This compares to four MCL violations and three monitoring or reporting violations for DBCP reported for all SOC in the previous year (2005).

The table in Appendix B indicates the five MCL violations were issued to five different PWSs serving an estimated population of 241 during the year.

DBCP may get into drinking water by runoff or leaching from soil fumigant used on soybeans, cotton, and orchards. Some people who drink water containing DBCP in

excess of the MCL over many years could experience reproductive difficulties and may have an increased risk of getting cancer. CDPH has set the drinking water standard for DBCP at 0.0002 part per million (ppm) to reduce these risks.

- **VOLATILE ORGANIC CONTAMINANTS**

PWSs are required to meet primary drinking water standards and monitoring and reporting requirements for 27 volatile organic contaminants (VOCs). The table in appendix A indicates there were no MCL or monitoring or reporting violations for the 27 VOCs during the year. In comparison, no VOC MCL violations and 28 monitoring and reporting violations occurred during the previous year.

- **RADIONUCLIDE CONTAMINANTS**

PWSs are required to meet primary drinking water standards and monitoring and reporting requirements for six radionuclide contaminants. From the table in Appendix A, seven MCL violations occurred for two of the six radionuclide contaminants, and nine monitoring or reporting violations occurred for two of the radionuclide contaminants. There were four radionuclide contaminant MCL violations for the previous year.

The table in appendix B indicates the seven radionuclide contaminant MCL violations were issued to six PWSs, serving an estimated population of 3,181 people during the year.

Of the seven radionuclide MCL violations, three were for Gross Alpha activity and four were for Uranium. The major source of Uranium in drinking water is from erosion of natural deposits. Some people who drink water containing uranium in excess of the MCL over many years may have kidney problems or an increased risk of getting cancer. CDPH has set the drinking water standard for Uranium at 20 pico curies per liter (pCi/L) to protect against the risk of these adverse health effects. EPA has also set a water standard for Uranium at 0.030 ppm. Drinking water that meets CDPH and EPA standards is associated with little to none of these risks.

The major source of Gross Alpha activity or alpha emitting radiation in drinking water is from erosion of natural deposits. Certain minerals are radioactive and may emit a form of radiation known as Gross Alpha activity. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer. CDPH has set the drinking water standard for Gross Alpha activity at 15 pCi/L to reduce these risks.

- **TOTAL COLIFORM RULE**

The Total Coliform Rule violations identify the presence of coliform microbiological contamination in drinking water supplies or failure of a PWS to conduct the required water quality monitoring for coliform bacteria in the water distribution systems. An acute

violation indicates a public water system detected fecal coliform or *E. coli* bacteria in the drinking water supply. A non-acute violation indicates a public water system detected total coliform bacteria in greater than five percent of the water samples analyzed in a month from the drinking water supply.

From the tables in Appendix A and B a total of 77 acute violations were incurred by 69 PWSs. This increased from the total of 37 acute violations by 33 PWSs during the previous year or an increase of 108 percent and 109 percent, respectively. Non-acute violations also increased during 2006 from the previous year. During 2006 a total of 646 non-acute violations incurred by 466 PWSs compared to 606 violations by 442 PWSs in 2005, or an increase of 6.6 percent and 5.4 percent, respectively. All violations occurred in 515 PWSs serving an estimated population of 391,477 people during the year, or 1.1 percent of the state population served by PWSs.

There were 790 significant monitoring and/or reporting violations incurred by 581 PWSs. These violations were issued for failure to conduct the required bacteriological monitoring for coliform bacteria, the required follow-up monitoring of their water systems, or failure to contact CDPH. These violations were slightly up from the 725 violations reported during 2005 by 583 PWSs.

Total coliforms are common in the environment and are generally not harmful themselves. The presence of these bacteria in drinking water, however, generally is a result of a problem with water treatment or the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease. Disease symptoms may include diarrhea, cramps, nausea, and possibly jaundice, and any associated headaches and fatigue. These symptoms, however, are not just associated with disease-causing organisms in drinking water, but also may be caused by a number of factors other than the drinking water. CDPH has set a drinking water standard for total coliforms to reduce the risk of these adverse health effects. Under this standard, no more than 5.0 percent of the samples collected during a month can contain these bacteria. For systems collecting fewer than 40 samples per month the standard is exceeded if more than one monthly sample contains these bacteria. Drinking water which meets this standard is usually not associated with a health risk from disease-causing bacteria and should be considered safe.

Fecal coliforms and *E. coli* are generally not harmful themselves, but their presence in drinking water is serious because they usually are associated with sewage or animal wastes. The presence of these bacteria in drinking water is generally a result of a problem with water treatment or the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease. Disease symptoms may include diarrhea, cramps, nausea, and possibly jaundice, and associated headaches and fatigue. These symptoms, however, are not just associated with disease-causing organisms in drinking water, but also may be caused by a number of factors other than the drinking water. CDPH has set an enforceable drinking water standard for fecal coliforms and *E. coli* to reduce the risk of these adverse health

effects. Under this standard all drinking water samples must be free of these bacteria. Drinking water which meets this standard is associated with little or none of this risk and should be considered safe.

- **DISINFECTANTS AND DISINFECTION BYPRODUCTS RULE**

PWSs are required to meet primary drinking water standards and monitoring requirements for three disinfectants, and four disinfection byproduct contaminants which can form when chemical disinfectants are added to drinking water sources. The table in Appendix A indicated 74 treatment technique and MCL violations incurred for three of the four disinfection byproduct contaminants, and 80 monitoring or reporting violations incurred for three disinfection byproduct contaminants, reporting and general requirements. The number of treatment technique and contaminant MCL violations for the year 2006 decreased from the 100 treatment technique and contaminant MCL violations reported during 2005.

Table B indicates the 74 treatment technique and MCL violations were issued to 74 separate PWSs, an increase from the 43 PWSs the year before. However, the 74 PWSs represent a 99.5 percent compliance by all PWSs. An estimated population of 213,505 people was exposed to the treatment technique and MCL violations during the year, or 0.58 percent of the state population served by PWSs.

CDPH sets drinking water standards and requires the disinfection of drinking water. However, when used in the treatment of drinking water, disinfectants react with naturally-occurring organic and inorganic matter present in water to form chemicals called disinfection byproducts (DBPs). CDPH has determined that a number of DBPs are a health concern at certain levels of exposure. Certain DBPs, including some trihalomethanes (THMs) and some haloacetic acids (HAAs), have been shown to cause cancer in laboratory animals. Other DBPs have been shown to affect the liver and the nervous system, and cause reproductive or developmental effects in laboratory animals. Exposure to certain DBPs may produce similar effects in people. CDPH has set standards to limit exposure to THMs, HAAs, and other DBPs. Drinking water which meets these standards is associated with little to none of these risks.

- **SURFACE WATER TREATMENT RULE, ENHANCED SURFACE WATER TREATMENT RULE (ESWTR)**

The Surface Water Treatment Rule (SWTR) and Enhanced Surface Water Treatment Rule (ESWTR) establish monitoring and reporting requirements, treatment techniques, performance standards, and turbidity standards to be met by PWSs using surface water as a drinking water source. For purposes of this report, the ESWTR includes the Interim Enhanced SWTR for PWSs serving 10,000 or more people, and the Long Term One ESWTR (LT1-ESWTR), which is essentially the same regulation for PWSs serving less than 10,000 people.

Treatment techniques and performance standards are used to establish water quality objectives instead of MCL's for microbiological contaminants that may be found in surface waters including *Giardia lamblia*, *Cryptosporidium parvum*, Legionella, heterotrophic plate count bacteria, and viruses. PWSs that use surface water are required to provide multi-barrier treatment to protect against adverse health effects from microbiological contaminants. All multi-barrier treatment systems must include the use of a filtration technology approved by CDPH. PWSs may be approved by CDPH to use surface water without providing filtration under certain conditions and requirements.

The table in Appendix A indicated 50 violations occurred during 2006 by 29 PWSs for turbidity exceedances and other treatment techniques required by the SWTR, the ESWTR, and the LT1-ESWTR. This decreased from the 70 violation by 41 PWSs reported during 2005 for similar requirements. The decrease is considered due to the return to compliance of PWSs with less than 10,000 people serving surface water following the effective date of January 14, 2005 for the LT1-ESWTR impacting these PWSs. Of the 29 PWSs contributing to the 50 violations, 28 PWSs served less than 10,000 people. The 50 violations affected a total estimated population of 64,853, lower than the 219,242 people impacted by 70 violations during 2005. During 2006, 11 monitoring and reporting violations were issued to PWSs. This number was less than the 17 violations reported during 2005.

Treatment technique violations under the Surface Water Treatment Rule and the Enhanced Surface Water Treatment Rule are typically incurred due to elevated turbidity levels in the water or a failure to maintain the required level of disinfection. Turbidity has no health effects. However, high levels of turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

- **FILTER BACKWASH RECYCLING RULE (FBR)**

The Filter Backwash Recycling Rule (FBR) established rules governing the way certain recycling streams are handled within treatment processes of certain PWS's filtration water treatment systems and established reporting and recordkeeping requirements for recycle practices to allow better evaluations and impacts of recycle practices on overall treatment plant performance.

There were no FBR violations issued by CDPH during the 2006 calendar year.

- **LEAD AND COPPER RULE**

PWSs are required to meet primary drinking water standards and monitoring and reporting requirements for lead and copper, when monitored from customers' water taps. Tables in Appendix A and B indicate there was one MCL violation for Copper,

none for Lead, and 29 monitoring or reporting violations by 27 PWSs during 2006. No violations were reported during the previous year.

The major source of Copper in drinking water is from internal corrosion of household plumbing systems, erosion of natural deposits, and leaching from wood preservatives. Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time may experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years may suffer liver or kidney damage. People with Wilson's disease should consult their personal doctor.

- **PUBLIC NOTIFICATION**

Five violations occurred during 2006 by four PWSs for failing to notify their customers of an MCL exceedance. Four of these were for total coliform MCL violations and one was for a TTHM MCL violation. One public notification violation was issued during 2005.

- **CONSUMER CONFIDENCE REPORT VIOLATIONS**

PWSs are required to provide to their customers a report each year of the quality of the water being served by their water system. This report, the Consumer Confidence Report, also includes information on the source of drinking water, the levels of any detected contaminants, and compliance with drinking water regulations by including a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of alternative water supplies available during the violation. During 2006 a total of 122 consumer notification violations were issued to 115 PWSs compared to 213 violations by 168 PWSs during 2005. This number of violations represents a 43 percent decrease. Of the 115 PWSs in violation of the reporting requirement, all but one of the PWSs served less than 1,000 people.

- **VARIANCES AND EXEMPTIONS VIOLATIONS**

CDPH is authorized under the federal SDWA to issue variances and exemptions from meeting drinking water standards to public water systems under special circumstances.

During the 2006 calendar year there were no variance or exemption violations issued by CDPH.

## **SECTION IV: Enforcement Activities**

In response to the violations identified in this report, CDPH issued a total of 1,107 enforcement letters, 314 citations, and 12 compliance orders to the affected PWSs. These numbers were 955, 270, and 22, respectively, during the previous year. The aggressive enforcement action, along with routine field inspections, is a key element of CDPH's overall regulatory strategy to bring all public water systems into full compliance with all of the drinking water standards and regulations to ensure all Californians receive safe drinking water.

CDPH's enforcement actions against a public water system that violates a primary drinking water standard vary according to the type of contaminant and the specific health risk from exposure to the contaminant in the drinking water. Typically, CDPH will require a public water system to immediately perform one or more of the following items depending upon the severity of the public health risk:

- Cease operation of the water system and provide an alternate source of safe drinking water.
- Shutdown or abandon the contaminated drinking water source.
- Conduct additional water quality monitoring to identify the cause and extent of the contamination and take appropriate corrective action.
- Modify the water treatment processes to eliminate the contamination.
- Provide notification of the drinking water contamination to water consumers and identify the potential health risks.
- Issue a "Boil Water Notice" (for bacteriological contamination) or "Do Not Drink Notice" (for contamination by other regulated contaminants).

For treatment technique and monitoring violations, CDPH will require the public water system to conduct the required contaminant monitoring program and/or provide the appropriate water treatment.

Additional enforcement actions available to CDPH include revoking or suspending a PWS's operating permit, assessing civil penalties up to \$25,000 per day for each day a drinking water standard violation occurs, or placing a PWS into receivership.

## **SECTION V: CONCLUSION**

Overall, PWSs in California delivered drinking water that generally met all of the established state and federal drinking water standards. The following table lists the estimated populations impacted by the categories of MCL or treatment technique violations discussed in the previous section to this report and as a relative percentage of the total state population served by PWSs.

MCL Violation Category	Impacted Population	Percent of Total Population
Inorganic Contaminants	124,608	0.34%
Synthetic Organic contaminants	241	0.00%
Volatile Organic Contaminants	0	0.00%
Radionuclide Contaminants	3,181	0.01%
Total Coliform Rule (acute and nonacute))	391,477	1.07%
Disinfectants/Disinfection Byproducts Rule	213,508	0.58%
Surface Water Treatment Rules	64,853	0.18%
Filter Backwash Recycling Rule	0	0.00%
Lead and Copper Rule	120	0.00%
Public Notification Rule	0	0.00%
Consumer Confidence Notification	0	0.00%
Exemptions and Variances	0	0.00%
Subtotal	797,988	2.18%
Total PWSs population	36,600,000	100.00%

It is not uncommon to have multiple violations issued to the same PWS from different violation categories. The table in Appendix C counts a PWS once for multiple MCL violations; thereby, providing the actual total number of PWSs issued MCL or treatment technique violations during 2006 and their respective total population. From the table in Appendix C there were a total of 641 PWSs issued MCL or treatment technique violations, serving a total population of 731,408 people during 2006. This population decreased by 10.7 percent from the previous year.

The success of CDPH, as the primacy agency responsible for the administration and enforcement of the SDWA requirements in California, will continue by adopting statutes and regulations to implement the requirements of the SDWA and regulate responsibility over PWSs through issuing operating permits, conducting inspections, monitoring for compliance with regulations, and taking enforcement action to compel compliance when violations are identified.

A copy of the 2006 Annual Compliance Report will be available to the public by contacting CDPH's Division of Drinking Water and Environmental Management Drinking Water Program at (916) 449-5600 or through the CDPH's website at: <http://www.cdph.ca.gov/certlic/drinkingwater/Pages/Publications.aspx>.

7000	Consumer Confidence Report				122	115
<b>Counts / Totals</b>			0	0	122	115

**Footnotes:**

a.....State MCL levels provided when MCL violations occurred. Treatment technique listed as "TT".

b.....Public water systems are counted once when the water system has multiple contaminant violations.

c.....Enhanced Surface Water Treatment Rules include Interim Enhanced SWTR (IESWTR) and the Long Term 1 Enhanced SWTR (LT1ESWTR)

# **APPENDIX B**

## **Summary of Public Water System Violations (By Contaminant, then by PWS Number)**
